ABSTRACT

This manual is intended to familiarize data users with the procedures followed for data collection and processing of the High School and Beyond (HS&B) base year (1980) through second follow-up surveys (1984) and to provide the extensive documentation necessary for using the senior cohort data files. In addition, information is provided on the origin of the surveys, the various instruments, methodology, sampling, and data collection procedures. The manual also contains the code book for the senior data, with information about the responses for items on the three questionnaires administered. Appendix A contains the following survey instruments: (1) Base Year Senior Identification Pages; (2) Base Year Senior Questionnaire; (3) First Follow-Up Senior Questionnaire; and (4) Second Follow-Up Senior Questionnaire. Additional appendices contain critical questionnaire items; code numbers for occupations, postsecondary schools, vocational schools, military specialties, fields of study, certificates and diplomas, and crosswalks between previous codes and the new classification codes; the 1980 senior file record layout; the coding scheme for estimated proportions; descriptions of other available data files; classification variables; and guidelines for using a Statistical Analysis System (SAS) procedure with HS&B data. Acknowledgments

The authors wish to thank all those persons who contributed to the production of this manual. For their considerable effort we would like to thank Christine Beard, Tucker Landy, Hymen Bern and Peggy Vevers in the Information Resources Center. We would like to thank SPSS, Inc. for the use of the source code for the frequencies procedures of release 9. This made it possible to generate a codebook with weights applied only to the column of valid percentages. Special thanks are also extended to Rosemarie Boykin for careful production of the manuscript. Special recognition is extended to Diane Bagues for her assistance in coordinating the production activities. Finally, we would also like to thank those members of the CS staff who have worked closely with us on this project: Helen MacArthur, Project Officer; C. Dennis Carroll, Chief of the Longitudinal Studies Branch; and Jeffrey Owings, Statistician.

FOREWORD

This manual has been produced to familiarize data users and others with the procedures followed for data collection and processing of the High School and Beyond base year through second follow-up surveys, and to provide necessary documentation for use of the data files.

Using the data tape does not require the analyst to be a statistician or sophisticated computer programmer. Most social scientists and policy analysts should find the tape organized and equipped in a manner that facilitates straightforward production of statistical summaries and analyses. This manual provides extensive documentation of the contents of the data files and how to use them. Chapter 7 and appendix H, in particular, contain essential information for the user so that he or she can get under way quickly and with minimal startup costs. A careful reading of chapter 7 and appendix H will help users to avoid common mistakes that result in costly computer job failures or incorrect results.

In addition, the user should be aware that CS and NORC have constructed an extensive series of composite variables that can be used in substantive analyses to control for numerous demographic and educational factors. Researchers should use these wherever possible in order to save time and eliminate the need for complicated programming. They are described in chapter 7 and fully documented in appendix G.

The rest of the manual provides information on the origin of the surveys, the various components, methods used, and so forth. ·Chapter 1 begins with the history and background of the study and a description of the Longitudinal Education Studies Program at the Center for Statistics. Chapter 2 contains a general description of the survey .pa questionnaires and other forms and procedures used to collect data for the HS&B 1980 senior cohort.

The sample designs for the base year and follow-up surveys are discussed in chapter 3. Greater detail on the sample design, weighting procedures, sampling errors and analyses of nonresponse patterns may be found in the sample design reports that accompany each HS&B survey.

Data collection procedures, schedules and results are presented in chapter 4. Chapter 5 describes data control and preparation activities such as monitoring receipt of questionnaires, editing and coding, and fail-edit callbacks to respondents. Data processing, including the conversion of questionnaire data to machine readable form, machine editing, and construction of the merged, clean data tapes is the subject of chapter 6. Finally, chapter 7 describes the organization and contents of the data files and gives important hints and suggestions for using them.

The manual also contains the codebook for the data, from base year through second follow-up. The appendices include copies of the questionnaires; codes used for schools attended, fields of study, occupations and industries, and so forth; the data layout; composite variables; guidelines for SAS users; and a list of other files available from CS.

1. INTRODUCTION

The High School and Beyond second follow-up survey was conducted during the spring and summer of 1984. Young persons who, either as sophomores or as seniors, had participated in the base year survey in 1980 were contacted for the third time in 1984 and asked to complete a questionnaire detailing their activities since leaving high school. This manual provides guidance and documentation for using the public release data tape for the 1980 senior cohort second follow-up survey. This data tape also contains merged senior data from the base year and first follow-up surveys. This manual also provides background information on the purposes of the study, the sample design, and the data collection and data processing procedures used in each of the three surveys. Similar information on data files and procedures for the younger, sophomore, cohort are documented in the High School and Beyond 1980 Sophomore Cohort Second Follow-Up (1984) Data File User's Manual.

1.1 Overview

1.1.1 CS' Longitudinal Studies Program

The mandate of the Center for Statistics (CS) includes the responsibility to "collect and disseminate statistics and other data related to education in the United States" and to "conduct and publish reports on specific analyses of the meaning and significance of such statistics" (Education Amendments of 1974 - Public Law 93-380, Title V, Section 501, amending Part A of the General Education Provisions Act).

Consistent with this mandate and in response to the need for policy-relevant, time-series data on nationally representative samples of high school students, CS instituted the National Education Longitudinal Studies (NELS) program, a continuing long-term project. The general aim of the NELS program is to study longitudinally the educational, vocational, and personal development of high school students and the personal, familial, social, institutional, and cultural factors that may affect that development.

The overall NELS program utilizes longitudinal, time-series data in two ways: (1) each cohort is surveyed at regular intervals over a span of years, and (2) comparable data are obtained from successive cohorts, permitting studies of trends relevant to educational and career development and societal roles. Thus far, the NELS program consists of two major studies: The National Longitudinal Study of the High School Class of 1972 (NLS-72) and High School and Beyond (HS&B). A third major study, to begin in 1988 and to continue throughout the decade of the 1990s, is currently being planned.

The first major study, NLS-72, began with the collection of comprehensive base year survey data from approximately 19,000 high school seniors in the spring of 1972. The NLS-72 first follow-up survey added to the sample nearly 4,500 individuals who had been unable to participate at the time of the base year survey. Three more follow-up surveys were conducted in the fall and winter of 1974, 1976, and 1979, using a combination of mail surveys and personal and telephone interviews. The fifth follow-up survey will take place during the spring of 1986.

The second major survey, HS&B, was designed to inform Federal and State policy in the decade of the 1980s. HS&B began in the spring of 1980 with the collection of base year questionnaire and test data on over 58,000 high school seniors and sophomores. The first follow-up survey was conducted in the spring of 1982, and the second follow-up survey in the spring of 1984. The HS&B third follow-up survey will be carried out in the spring of 1986.

The three survey cohorts (NLS-72 seniors and the HS&B seniors and sophomores) are displayed in Figure 1 according to their initial and subsequent survey years and their modal age at the time of each survey. As shown, the NLS-72 seniors were first surveyed in 1972 at age 18 and have been resurveyed four times since, with the last survey occurring in 1979 when these young adults were about 25 years of age. The HS&B cohorts have been surveyed at points in time that would permit as much comparison as possible with the time points selected for NLS-72. In particular, three types of comparison are possible.

First, the three cohorts may be compared on a time-lag basis (intercohort or intergenerational). For example, the high school seniors of 1972 and the high school seniors of 1980 and 1982 may be contrasted to determine changes over time in the composition, distribution and needs of high school seniors.

Second, fixed-time comparisons can be undertaken. For a given year, the data collection for each cohort can be viewed as a .pa cross-sectional study. It is possible, for example, to compare employment rates in 1980 of 16-, 18- and 26-year-olds.

The third type of analysis is longitudinal (within cohort) and is designated in Figure 1 by the diagonal lines. Because the history of the age cohort can be taken into account and modeled, analyses can be designed that isolate school and program effects from the effects of differential life experiences.

1.1.2 High School and Beyond and NLS-72

High School and Beyond was designed to build on the NLS-72 in three ways. First, the base year survey of HS&B included a 1980 cohort of high school seniors that was directly comparable with the 1972 cohort. Replication of selected 1972 student questionnaire items and test items made it possible to analyze changes that occurred subsequent to 1972 and their relationship to recent Federal policies and programs in education. Second, the introduction of a sophomore cohort provided data on the many critical educational and vocational choices made between the sophomore and senior years in high school, permitting a fuller understanding of the secondary school experience and its impact on students. Finally, HS&B expanded the NLS-72 focus by collecting data on a range of life cycle factors, such as family-formation behavior, intellectual development, and social participation.

1.2 History of High School and Beyond

1.2.1 The Base Year Survey

The base year survey was conducted in spring 1980. The study design provided for a highly stratified national probability sample of over 1,100 secondary schools as the first stage units of selection. In the second stage, 36 seniors and 36 sophomores were selected per school (in schools with fewer than 36 in either of these groups, all eligible students were included). Special efforts were made to identify those students within the sample who were twins or triplets so that their co-twins or co-triplets could be invited also to participate in the study. (Data from non-sampled twins and triplets are not included in the student data files, but are available in a separate Twin Data File which links questionnaire data for both sampled and non-sampled twins for special analyses.) Over 30,000 sophomores and 28,000 seniors enrolled in 1,015 public and private high schools across the country participated in the base year survey. (Detailed information about the samples can be found in the HS&B sample design report for the base year: Martin R. Frankel, Luane Kohnke, David Buonanno, and Roger Tourangeau, Sample Design Report, NORC, 1981.)

Certain types of schools were oversampled to make the sample more useful for policy analysis. These included:

- public schools with high percentages of Hispanic students to ensure sufficient numbers of Cuban, Puerto Rican and Mexican students for separate analysis
- Catholic schools with high percentages of minority group students
- alternative public schools
- private schools with high-achieving students

The Hispanic supplement to the sample was funded jointly by the Office of Bilingual Education and Minority Language Affairs (OBEMLA), and the Office for Civil Rights (OCR) within the Department of Education. An additional supplementary sample was drawn from students attending Department of Defense Dependents Schools (DoDDS) located overseas. DoDDS students are not included in the data tapes distributed by CS, however.

Survey instruments in the base year included:

- school questionnaire
- student identification pages
- sophomore questionnaire
- senior questionnaire
- a series of cognitive tests for each cohort

- teacher comment checklist
- parent questionnaire (mailed to a sample of parents from both cohorts)

The student questionnaires focused on individual and family background, high school experiences, work experiences, and plans for the future. The student identification pages included a series of items on the student's use, proficiency, and educational experiences with non-English languages, as well as information which would be useful in locating the students for future follow-up surveys. The cognitive tests measured both verbal and quantitative abilities. In addition, sophomore tests included achievement measures in science, writing, and civics, while seniors were asked to respond to tests measuring abstract and nonverbal abilities. Of the 194 test items administered to the HS&B senior cohort in the base year, 86 percent were identical to items which had been given to the NLS-72 base year respondents.

School questionnaires, which were filled out by an official in each participating school, provided information about enrollment, staff, educational programs, facilities and services, dropout rates, and special programs for handicapped and disadvantaged students. The Teacher Comment Checklist provided teacher observations on students participating in the survey. The Parent Questionnaire elicited information about how family attitudes and financial planning affected postsecondary educational goals.

1.2.2 The First Follow-Up Survey

The first follow-up sample consisted of approximately 30,000 1980 sophomores and 12,200 1980 seniors. It retained the multi-stage, stratified, and clustered design of the base year sample. All students who had been selected for inclusion in the base year survey, whether or not they actually participated, had a chance of being included in the first follow-up sample. Unequal probabilities were compensated by weighting. A subsample of 11,500 students was selected from among the senior cohort base year participants (see chapter 2). This subsampling was carried out to ensure adequate sample sizes for policy relevant groups needed to address policy issues in areas such as excellence in education, access to postsecondary education, need for financial aid, and the impact of education on career choices. A special sample of 495 students was selected from among those 1980 seniors who had been selected for inclusion in the base year survey but who had not actually participated.

The first follow-up survey also included all non-sampled co-twins (and triplets) who had been identified and surveyed during the base year, provided that the sampled twin was retained for the follow-up. However, non-sampled twins were not included in the probability sample and were not weighted. Their data appear only on a separate Twin Data File.

As in the base year survey, the Hispanic supplement to the first follow-up survey was supported by OBEMLA and OCR. In addition, the United States Army Recruiting Command (USARC) supported the retention in the first follow-up sample of 200 additional 1980 seniors who had moderate to high achievement scores but no plans for postsecondary education.

A first follow-up school questionnaire was requested of all schools selected in the base year (including those schools that had refused to participate), with the exception of schools that had no 1980 sophomores, that had closed, or that had merged with other schools in the sample. Schools that had received en masse transfers of students from base year schools were contacted to complete a first follow-up school questionnaire and to arrange student survey activities. These schools are not considered to be part of the probability sample of secondary schools and do not appear on the Updated School Data File. The first follow-up survey also included a sample of students from the Department of Defense Dependents Schools (DoDDS). DoDDS students were not part of the main probability sample and were not weighted.

For the senior cohort, a self-administered mail-back questionnaire was the basic method of data collection. Approximately 12,200 packets containing survey questionnaires, instruction sheets and incentive payment checks were sent to sample members during the first week of February 1982. Postcards with dual messages seeking a quick reply from nonrespondents and thanking early respondents for their cooperation were mailed during the third week following the initial mailout. Two weeks later, those who still had not responded were telephoned by trained telephone interviewers. Approximately 75 percent of the targetted senior cohort members completed and returned first follow-up questionnaires by mail. An additional 19 percent completed the questionnaires by either in-person or telephone interviews. (A variable indicating the method of survey administration, FEMETHD, is included among the data for the first follow-up survey.) Respondents who completed the questionnaire via telephone interview were required to have a copy of the questionnaire in front of them while doing so, to keep their survey experience as similar as possible to that of the majority of respondents, who filled out the questionnaires themselves. Follow-up interviewing was halted in mid-July of 1982, after a response rate of 94 percent had been obtained.

1.2.3 The Second Follow-Up Survey

The sample design for the second follow-up survey was the same as that used for the first follow-up. Survey activities were initiated for all individuals who had participated in the first follow-up except for eleven persons who were known to be deceased.

As in the first follow-up survey, mail-back questionnaires were again the basic method of data collection. During the first week of February 1984, approximately 12,000 packets of survey materials were mailed to the last known addresses of the sample members. Two weeks later, postcards thanking respondents for their cooperation and requesting the cooperation of nonrespondents were mailed to all sample members. Two weeks after the cards were sent, trained telephone interviewers called those who had still not responded and urged them to do so. When this failed, interviews were conducted by telephone or in person. Approximately 73 percent of the senior sample members mailed back their completed questionnaires; about 13 percent were interviewed by telephone; and about 5 percent were interviewed in person (see METHOD in appendix G). As in the earlier follow-up, the survey design required that respondents who were to be interviewed over the telephone or in person have a copy of the questionnaire before them during the interview, to minimize bias due to the method of administration. Follow-up interviewing continued through July 1984, and resulted in a completion rate of over 91 percent.

2. DATA COLLECTION INSTRUMENTS

Information on the 1980 senior cohort has come primarily from questionnaires filled out by students, school administrators, teachers, and parents of students. These data have been supplemented by information on courses taught at sampled schools and the number of students enrolled in those courses. The survey instruments given to school officials, teachers, and parents, as well as the protocols and procedures governing the transmittal of information on course offerings and student transcripts, are described in the user's manuals for each of those data files. (See appendix F for a complete list of public release data files available from CS.) Features of the senior questionnaires used in the first three waves of High School and Beyond are described below. The actual questionnaires are reproduced in appendix A.

2.1 Base Year (1980) Survey

The base year senior and sophomore questionnaires were very similar. Approximately three-fourths of the items in each version were common to both. Most of the questions in the senior questionnaire focused on students' behavior and experiences in the secondary school setting. Also included were questions about employment outside the school, postsecondary educational and occupational aspirations, and personal and family background. A small number of questions dealt with personal attitudes and beliefs. In addition, to facilitate the recontacting of students in later follow-up surveys, students were asked to provide complete addresses and telephone numbers for themselves and for some other person who would always know their whereabouts. Seniors also completed a battery of cognitive tests which are described briefly below:

Vocabulary (27 items, 9 minutes): uses a synonym format.

Reading (20 items, 15 minutes): consists of short passages (100-200 words) followed by comprehension questions and a few analysis and interpretation items.

Mathematics (33 items, 19 minutes): students are asked to determine which of two quantities is greater, whether they are equal, or whether there is insufficient data to answer the question.

Picture Number (15 items, 5 minutes): a test of associative memory consisting of a series of drawings of familiar objects each paired with a number. The students, after studying the picture number pairs, are asked to recall the number associated with each object.

Mosaic Comparisons (89 items, 6 minutes): measures perceptual speed and accuracy. Items require that small differences be detected between pairs of otherwise identical mosaics or tile-like patterns.

Visualization in Three Dimensions (16 items, 9 minutes): students are asked to visualize the shape which a flat piece of metal (represented by a line drawing) would assume if folded along specified lines, and to select this three-dimensional shape from a group of possible answers.

Questions about the test (5 minutes): students are asked how they felt about taking the test, and how important they thought the various abilities it measured would be to them later in life.

The cognitive test for the senior cohort was designed to overlap to a great degree with tests developed for both the 1980 sophomore cohort and the NLS-72 cohort.

2.2 First Follow-Up (1982) Survey

Most of the items in the 1980 Senior Cohort First Follow-Up Questionnaire can be traced to the Base Year Senior Questionnaire or to the NLS-72 Fourth Follow-Up Questionnaire. Content areas in the senior questionnaire included education (amount and type of postsecondary schooling completed, data on schools attended, school financing, educational expectations and aspirations, and non-school-based postsecondary training), work (labor force participation, detailed job histories, aspirations, military service), financial status (dependency, income), marital status (spouse's occupation, education, dependents), and demographics (household composition, race, sex, ethnicity, etc.). Questions on employment and schooling were constructed and arranged in an "event history" format in order to provide information suitable for analyses using advanced techniques for determining parameters of transition models.

Approximately 30 items in the instrument were identified as "critical" or "key" questions (see appendix B). Special efforts were taken to ensure that these items were not omitted by any respondent.

2.3 Second Follow-Up (1984) Survey

The 1980 Senior Cohort Second Follow-Up Questionnaire contained many of the same items that were used in the first follow-up survey. Respondents were asked to update background information, to provide information about postsecondary education, work experience, military service, family information, income, and life goals. Event history formats were used for obtaining responses about jobs held, schools attended and periods of unemployment. New items included a limited series on computer literacy (e.g., use of computers and software, knowledge of computer languages), detailed information on financial assistance received from parents for pursuing postsecondary education (including measures of the components of student "independence/ dependence" as defined in Federal regulations in force at the time), education and training obtained outside of regular school, college or military programs (on-the-job and other employer provided training), and periods of unemployment.

About 35 items in the second follow-up questionnaire were designated as "critical questions" for editing purposes (see apendix B). Respondents who omitted these items or who provided inconsistent data were called by telephone to obtain the missing data or to resolve inconsistencies.

2.4 Postsecondary Education Transcript Survey

Although no survey forms were used, detailed procedures were developed for extracting and processing information from postsecondary school transcripts which were collected for all members of the 1980 senior cohort who reported attending any form of postsecondary schooling in either of the follow-up surveys. (Over 7,000 individuals reported over 11,000 instances of school attendance). Transcript data on dates of attendance, fields of study, degrees earned, and the titles, grades and credits of every course attempted at each school attended were coded into hierarchical files with the student as the highest level of aggregation. These data will be released by CS during the latter part of 1985. Data file user's manuals accompanying those tapes will describe the transcript data in detail.

2.5 Student Financial Aid Records

In addition to transcripts, student financial aid records for each member of the 1980 senior cohort who received financial assistance for postsecondary school attendance is being abstracted from records maintained by institutional financial aid offices and from the Pell Grant and Guaranteed Student Loan systems of records maintained by the U.S. Department of Education. These data are scheduled to be released by 1986 and will be fully documented in an accompanying data file user's manual.

3. SAMPLE DESIGN AND IMPLEMENTATION

3.1 Base Year Sample Design[1]

The base year survey employed a two-stage, highly stratified sample design with schools as the first stage units and students within schools as the second stage units. With the exception of certain special strata, which were oversampled, schools were selected with probabilities proportional to their estimated enrollment in the 10th and 12th grades. Within each school, 36 seniors and 36 sophomores were randomly selected. In schools with fewer than 36 seniors or 36 sophomores, all eligible students were selected. Sampling rates were set so as to select within each stratum the number of schools needed to satisfy study design criteria regarding minimum sample sizes for certain types of schools. As a result, some schools had a very high probability of inclusion in the sample (in some cases equal to 1.0) while others had a very low probability of inclusion. The total number of schools selected for the sample was 1,122, from a frame of 24,725 schools with grades 10 or 12 or both.[2] Sampling strata and the number of schools selected in each are shown in table 3.1-1.

Substitutions were made for schools that refused to participate in the survey. No substitutions were made, however, for students who for whatever reason failed to participate.[3] Substitutions for refusal schools occurred only within strata. In certain cases no substitution was possible because school was the sole member of its stratum. (See the High School and Beyond Second Follow-Up (1984) Sample Design Report, available from CS.)

The realization of the sample by stratum is shown in table 3.1-2. Although the sample design specified that students in all but the special strata would be selected with approximately equal probabilities, the probabilities are only roughly equal. In the special strata students were selected with higher probabilities which, in some instances, were extremely high. Moreover, the sample as realized did not equal the sample as drawn, creating further deviations from a self-weighting sample. Consequently, each school (and student) was assigned a weight equal to the number of schools (or students) in the universes they represented. Since each student's overall selection probability (hence weight) was further influenced by the sample design, the derivation of student case weights is discussed below. Calculation of school weights is described in the user's manual for the school questionnaire data file.

Use of weights should lead to correct estimates (within sampling error) of the population of 10th and 12th grade students in United States schools in spring 1980, and of subgroups within that population. If comparisons with other data sources strongly indicate that certain population estimates

3.2 1980 Senior Cohort Sample Design for First and Second Follow-Up Surveys

All 1980 senior cohort students selected for the base year sample had a known, non-zero chance of being selected for the first and all subsequent follow-up surveys. The follow-up sample consists of 11,995 selections from the base year probability sample. This total includes 11,500 selections from among the 28,240 base year participants and 495 selections from among the 6,741 base year nonparticipants. In addition, 204 non-sampled co-twins or triplets (not part of the probability sample) are included in the follow-up sample, resulting in a total of 12,199 selections. The public use tape described in this manual contains data only for the probability sample. Data for the twin pairs and triplets is available from CS on a separate tape.

Several features of the senior cohort follow-up sample design enhance its usefulness. First, the inclusion of 495 base year nonrespondents facilitates the estimation of nonresponse bias in base year data. Second, the selection of 1,500 additional Hispanic students beyond the number expected in the CS core sample allows more complex, detailed analysis of Hispanic student outcomes. (This supplementary sample was supported by the Office for Bilingual Education and Minority Language Affairs.) Third, since the sampling plan called for retention in the follow-up surveys of less than one-half of the 1980 seniors who had participated in the base year survey, it was important to devise a subsampling plan that would retain in the follow-up sample sufficient numbers of students with the kinds of characteristics that past research had indicated would be required for education policy analyses. This required adjusting the subsampling rates for these students in order to retain sufficient numbers of them in the follow-up sample. Thus, the follow-up sample, though much smaller, is able to provide estimates for many subpopulations that are nearly as precise, statistically, as those of the larger base year sample. The follow-up sample allocation is shown in table 3.2-1.

The sample of 495 students from the pool of base year nonrespondents was drawn in two stages. First, 404 schools were selected with probabilities based upon the number of nonrespondents and base year sampling weights. From the 404 selected schools, individual nonrespondents were selected by sequence number from the original base year sample rosters. A single selection was made in 318 schools; two or more nonrespondents were selected in 86 schools.

(a) Includes Hispanic supplement of 1,500 students.

(b) Includes USARC supplement. Total number of moderate to high achieving males with no college plans is 947.

(c) High achievement for Black and Hispanic students is defined as having a composite High School and Beyond test score above the weighted mean for the entire population.

(d) Among Whites, low SES is defined as the lowest quartile of the composite SES score distribution for the entire population. High Achievement is defined as a composite High School and Beyond test score in the highest quartile for the entire population.

(e) Cases in this row are Whites who are missing data on either the composite SES score or the composite High School and Beyond test score.

(f) Cases in this cell are students whose parents provided data and who reported in 1980 that their main activity after high school would involve postsecondary education.

(g) Cases in this cell include approximately 160 selections from the group of 875 "other Whites" with parent data who had no plans for postsecondary education and thus were not reselected with certainty.

3.2.2 Weighting of the Follow-Up Sample

The general purpose of the weighting scheme is to compensate for unequal probabilities of selection (retention) for the follow-up surveys and to adjust for the fact that not all individuals selected for participation in the surveys actually participated. The weights are based on the inverse of the probabilities of selection through all stages of the sample selection process and on nonresponse adjustment factors computed within weighting cells. A raw weight, unadjusted for nonresponse in any of the three surveys, was also calculated and included on the data file. The raw weight provides the basis for analysts to construct additional weights, adjusted for the presence of virtually any combination of data elements (e.g., test scores, postsecondary school transcripts).

The 1980 Senior Cohort Second Follow-Up data file includes questionnaire data from the base year and the first two follow-ups and also the base year test data. Several different weights have been calculated to adjust for the fact that not all sample members have data for all instruments in all survey waves. Table 3.2.2-1 describes the six weights calculated for the senior cohort. These weights project to the population of approximately 3,040,000 1980 high school seniors.

The follow-up weighting procedures consisted of two basic steps:

Step 1. Calculation of a preliminary follow-up weight based on the inverse of the product of the probabilities of selection for the base year sample and retention in the follow-up subsample. This new raw weight is simply the base year raw weight adjusted for the probability of retention in the follow-up surveys.

Step 2. Adjustment of this preliminary weight to compensate for "unit" nonresponse, that is, for non-completion of an entire questionnaire or test, or some combina[illegible] documents or surveys. (The exception is the raw weight, RAWWT, which is, by definition, unadjusted for nonresponse.)

These steps are described in more detail below.

Table 3.2.2-1

RAWWT	All follow-up selections	11,995

*These base year weights are not the same as those calculated during the base year survey, when the cohort sample size was much larger. These weights are the follow-up raw weights adjusted for nonresponse during the base year survey.

3.2.2.1 Weighting Procedures for Follow-Up Surveys

The follow-up sample of the 1980 senior cohort consisted of two separately selected and weighted strata: a stratum of 11,500 base year participants, and a stratum of 495 base year nonparticipants. These two strata were separately weighted with inverse probability weights, and adjusted for nonresponse. Thus, the base year nonparticipants who were selected for and participated in the follow-up surveys are allowed to "stand for" all base year nonparticipants in their school type. Similarly, the stratum of base year participants who participated in the follow-up surveys represent all base year participants. This stratified weighting approach reduces the possible impact of any bias due to base year nonresponse. The weighting of the base year participant stratum is discussed first, followed by the base year nonparticipant stratum.

3.2.2.2 Base Year Participant Stratum

Step 1: Calculation of a preliminary follow-up raw weight. As the first step in weighting this stratum, a preliminary follow-up weight was established equal to the base year weight times the inverse of the probability of retention in the follow-up sample. For students retained with certainty, this preliminary weight was the same as their base year weight. For all others, it reflected their rate of subsampling for the follow-up surveys.

Step 2: Nonresponse adjustments. In this step, the raw follow-up weight obtained in Step 1 was multiplied by a nonresponse ratio adjustment factor. These factors were obtained separately for 104 weighting cells based on type of high school, sex, race/ethnicity, and base year test quartile. Of the 120 cells in this cross-classification, sixteen contained only a few cases and were collapsed with neighboring cells to avoid unacceptably large nonresponse adjustment factors.

Within each weighting cell a nonresponse adjustment factor was calculated as the ratio of the sum of raw weights for all students included in the follow-up selections to the sum of raw weights for all participants. This ratio constituted the nonresponse adjustment factor for sample cases in this cell and was applied to the weight of each sample participant in the cell. Raw weights for nonparticipant cases (for any survey wave or combination of waves) were multiplied by a nonresponse adjustment factor of 0 to produce a final weight of 0 for the nonparticipating cases.

3.2.2.3 Base Year Nonparticipant Stratum

Step 1: Calculation of a follow-up raw weight. For senior cohort base year nonparticipants, the probability of retention in the follow-up sample was made proportional to the base year weight of students in the school where the base year nonparticipant had been selected. As a result, for each of the 495 base year nonparticipants selected for the follow-up sample, the probability of selection in the base year times the probability of retention in the follow-up equaled a constant (.0010915). Using the inverse of this selection probability, a follow-up raw weight of 916.1486 was obtained for each senior base year nonparticipant selected for the follow-up sample. This weight was then adjusted for nonresponse as described below.

Step 2: Nonresponse adjustment. In this step, nonresponse adjustment factors were calculated from the sum of weights of all selections for the follow-up and the sums of weights for all participants within each of the weighting cells. Cells were based only on four categories of school type because of the small number of cases retained for follow-up in the base year nonparticipant stratum (495).

3.2.2.4 Results of Weighting

As a check on the adequacy of the sample case weights NORC analyzed first the statistical properties of the weights and second the effects of various weights on the composition of the follow-up samples. The results of the first procedure are displayed in tables 3.2.2.4-1. These tables show the mean, variance, standard deviation, coefficient of variation, minimum, maximum, skewness, and kurtosis for each of the weights calculated for the 1980 senior cohort for inclusion on the second follow-up public use data tapes. The second set of procedures was carried out during the preparation of the HS&B first follow-up data tapes and results were reproduced in the High School and Beyond First Follow-Up (1982) Sample Design Report. These results demonstrate that the weighting procedures succeeded in preserving the distributional properties of the original sample, regardless of the weight employed.

3.2.3 Standard Errors and Design Effects

Statistical estimates calculated using High School and Beyond survey data are subject to sampling variability. Because the sample design for the HS&B cohorts involved stratification, disproportionate sampling of certain strata, and clustered (i.e., multi-stage) probability sampling, the calculation of exact standard errors for survey estimates can be difficult and expensive. Popular statistical analysis packages such as SPSS (Statistical Programs for the Social Sciences) or SAS (Statistical Analysis System) normally calculate standard errors using the assumption that the data being analyzed were collected from simple random samples. As described in detail in the High School and Beyond sample design report for each survey wave, the HS&B sample design is, on balance, somewhat less efficient than simple random samples of equal size. Thus, sampling errors generated by SPSS and SAS will normally underestimate significantly the sampling variability of statistical estimates such as population means, percentages and more complex statistics like correlation and regression coefficients.

Several procedures are available for calculating precise estimates of sampling error for complex samples. Procedures such as Taylor series approximations, Balanced Repeated Replication (BRR) and Jackknife Repeated Replication (JRR) vary somewhat with respect both to computational convenience and cost, and to their ability to account for several sources of sampling variability, most notably clustered selection of sample cases. Sampling error estimates presented in this manual were calculated by the method of Balanced Repeated Replication (BRR), using a public-domain statistical subroutine called as a Statistical Analysis System (SAS) procedure. Copies of this subroutine, and instructions for its use with

High School and Beyond student sample data, are available upon request from CS.

This section presents four sets of standard errors and design effects calculated on data from three waves. The first three sets utilize the first follow-up sample of seniors, while the fourth utilizes the second follow-up sample of seniors. The four sets pertain to proportions of a sample who had specified characteristics.

Table 3.2.3-1 displays standard errors and design effects using the first follow-up questionnaire data and the first follow-up weights. Table 3.2.3-2 uses a subset of the students who were selected for participation in the first follow-up, namely, those who actively participated in the base year survey.

Table 3.2.3-3 utilizes only those students who participated in both the base year and the first follow-up survey. It presents the standard errors and design effects associated with the changes, between base year and first follow-up, in the proportion of first follow-up seniors who had specified characteristics.

The change estimates were calculated using individual change scores of members of the senior cohort who participated in both the base year and first follow-up. Thus, the standard errors for these estimates take into account the correlation between base year and first follow-up responses. Finally, table 3.2.3-4 displays standard errors for 30 estimated percentages based upon second follow-up survey data. Only ten of the thirty items presented in the preceding tables were included in the second follow-up survey questionnaire. Twenty additional items, representing estimated proportions of varying magnitudes, were added to this table.

Estimates in tables 3.2.3-1 to 3.2.3-4 are weighted. The procedures for calculating these weights were described in section 3.4, above. The estimates in table 3.2.3-1 use the first follow-up weights (FU1WT); those in table 3.2.3-2 use the base year weights (BYWT); those in table 3.2.3-3 use the first follow-up panel weights (PANELWT). (NOTE: These weights are adjusted for participation in both the base year and first follow-up surveys, and hence differ from the second follow-up panel weights (PANELWT3), which are adjusted for participation in all three survey waves.) Estimates in table 3.2.3-4 were based on the second follow-up weights (FU2WT).

All standard errors in the tables were calculated using the method of Balanced Repeated Replication (BRR). BRR employs a very simple algorithm: it divides the sample repeatedly into half-samples and compares the estimates obtained from each of the half-samples with the estimate obtained from the entire sample. The differences between half-sample and entire sample estimates are used to estimate the standard error. BRR is described in more detail in the sample design reports for the first and second follow-up surveys (available from CS).

In addition to standard errors, all four tables give the design effect for each estimate (DEFF) and the square root of each design effect (DEFT). The design effect is a measure of the efficiency of the sample estimate relative to a simple random sample of equal size. It is defined as the ratio of the actual variance of an estimate (i.e., the square of the standard error given in the table) to the variance of the same estimate from a simple random sample with the same number of cases. For proportions, the simple random sample variance is just

$$\mathrm{VAR(SRS)} = p(1 - p)/n \qquad (1)$$

in which

p = the estimated proportion

n = the number of cases with non-missing data

Like almost all national samples, the High School and Beyond sample is not a simple random sample. The High School and Beyond sample departs from the model of simple random sampling in three major respects: the observations are clustered at the school level; major groups (such as students who attended private schools) are deliberately represented disproportionately; and the sample is stratified by type of school. Each of these departures from simple random sampling has a predictable effect on efficiency, which is reflected in the design effect.

Table 3.2.3-1 shows that the mean design effect for the 30 proportions is 2.64. This is very close to the mean (2.69) found for the base year survey (see Frankel, et al., p. A-24) using Taylor series estimation procedures rather than BRR. The sample of seniors for the follow-ups differs from the base year senior sample in several key respects. First of all, the sample is much smaller (11,995 selected cases versus 34,982), which means that the average cluster size (selections per school) is much smaller. Reducing the cluster size should increase the efficiency of the sample. On the other hand, the first follow-up sample of seniors represents some population subgroups even more disproportionately than did the base year sample; this greater disproportionality decreases the efficiency of the follow-up sample by introducing additional variability into the weights. Apparently, the effects of the reduced cluster size and the increased disproportionality offset each other--the base year and the follow-up samples exhibit very similar mean design effects.

Table 3.2.3-2 displays estimates for the base year senior sample using only data from base year participants who were selected for the first follow-up sample. The questionnaire items in table 3.2.3-2 are identical to those in table 3.2.3-1 but the estimated proportions and standard errors are based on responses to these items in the base year senior questionnaire. For the most part, these items were repeated verbatim in the first follow-up questionnaire; three of them, however, had an additional response option in the first follow-up questionnaire. As table 3.2.3-2 shows, the mean design effect is 2.73, a value that differs little from the analogous figure calculated during the base year. Once again, the reduced cluster size for the follow-up sample seems to have offset the effect of increased oversampling on the overall efficiency of the sample.

Table 3.2.3-3 shows standard errors and design effects for thirty change statistics. The change statistics were computed by taking the weighted mean of the changes shown by each respondent who participated in both the base year and first follow-up surveys. The standard errors (and design effects) thus reflect the fact that whether a respondent was, for example, hard of hearing during the base year is correlated with his or her being hard of hearing during the first follow-up. The change estimates are directional: a negative estimate indicates that fewer respondents fell into the category of interest (e.g., hard of hearing) during the follow-up survey; a positive estimate indicates that more respondents fell into the category. The mean design effect in table 3.2.3-3 is lower than those for tables 3.2.3-1 and 3.2.3-2 (2.20 vs. 2.64 and 2.73). This probably reflects the fact that more complex statistical estimates (such as change estimates, correlation or regression coefficients) generally exhibit smaller design effects than simple estimates.

Table 3.2.3-4 contains the estimated percentages, standard errors, DEFFs and DEFTs for 30 survey items or composite variables from the second follow-up survey. Although the mean root design effect (1.68) appears to be slightly larger than those observed for the base year and first follow-up, the variability of the design effects appears to be somewhat smaller than for either of the previous survey waves. The use of a generalized design effect to inflate standard errors computed via simple random sample formulas remains at least as appropriate for second follow-up data as for prior waves.

Table 3.2.3-5 presents selected distributional statistics for the DEFF and DEFT factors for the same thirty second follow-up items contained in the preceding table for the total population and for nine selected domains. With the exception of Hispanics, the DEFTs for subgroups are generally ten percent smaller than that for the total population. The relative efficiency of the Hispanic subsample continues to be affected by the somewhat greater clustering of the Hispanic sample members in specific schools and relatively few geographical areas. Furthermore, the variability of the DEFTs for Hispanics is over twice that observed for most other subgroups. Thus, for analysis of data from Hispanics, the use of a single generalized design effect to inflate simple random sample estimates of sampling errors must be considered subject to greater uncertainty.

The mean design effects given in tables 3.2.3-1 through 3.2.3-4 can be used to calculate approximate standard errors for other estimates not included in the tables. For example, the standard error of a proportion can be estimated using the square root of the expression in (1) (on page 32) times the mean root design effect (DEFT):

$$SE = DEFT\ (p[1-p]/n)^{1/2} \qquad (2)$$

Similarly the standard error of a change in proportion can be calculated as the mean DEFT times the square root of the weighted variance of the change scores:

$$SE = DEFT\ (WTVAR/n)^{1/2} \qquad (3)$$

in which

WTVAR = weighted variance of the individual change scores

n = unweighted number of valid observations

DEFT = mean of the root design effects for change estimates

The appropriate weight to use in calculating the variance for change estimates using the base year through second follow-up survey data is the panel weight (PANELWT3).

NOTES TO CHAPTER 3

[1] For further details on the base year sample design see Martin R. Frankel, Luane Kohnke, David Buonanno, and Roger Tourangeau, Sample Design Report (Chicago: NORC, 1981).

[2] The sampling frame, defined as the universe of high schools in the United States, was obtained from the 1978 list of U.S. elementary and secondary schools of the Curriculum Information Center, a private firm. This was supplemented by the CS lists of public and private elementary and secondary schools. Any school listed in any of these files that contained a 10th grade, a 12th grade, or both was made part of the frame.

[3] Apart from substitution for schools that refused, there were a number of schools in the originally-drawn sample that were "out-of-scope," that is, they failed to fit the criteria for inclusion in the sample. The sample was then augmented through selection of an additional school for each out-of-scope school, within major strata. Most of the out-of-scope schools were area vocational schools having no enrollment of their own, although they were listed in the frame as having enrollments.

4. DATA COLLECTION

4.1 Overview

To date, High School and Beyond has compiled data from five primary sources: school administrators, teachers, students, students' administrative records (transcripts), and parents of selected students. In the base year (1980) survey, 1,015 secondary schools served as the primary sampling units for the study. The principal or headmaster of each school was asked to complete a school questionnaire and to provide materials essential for the sampling of students in the tenth and twelfth grades.

Samples of approximately 36 students in each grade were asked to fill out a Student Identification Pages booklet (which included several items on the use of non-English languages as well as confidential identifying information) and a student questionnaire, and to take a timed cognitive (achievement) test. Teachers of selected students were asked to fill out brief Teacher Comment Forms containing 10 items on student traits and behavior.

During the fall following the base year survey, data were collected from over 7,100 parents of student respondents (roughly half from each student cohort). These data focused primarily on parents' ability to finance postsecondary education for their sons and daughters.

The first follow-up survey in the spring of 1982 added a second wave of data from 1980 seniors and sophomores. School administrators were again asked to complete a school questionnaire and to provide information on the secondary level course offerings and enrollments for their institutions. In the fall of 1982, high school transcripts were requested for a probability sample of approximately 18,500 members of the 1980 sophomore cohort.

In this section the data and materials collected for the High School and Beyond base year, first follow-up and second follow-up surveys are described. These materials and activities are covered in greater detail in the technical reports and sample design reports for the first and second follow-up surveys.

4.2 Data and Materials Collected at the School Level

Three broad types of school-level information have been compiled for High School and Beyond: school questionnaires, course offerings and enrollments, and Teacher Comment Forms. School personnel were also asked to provide such materials as student rosters (see the base year Sample Design Report), class schedules, and so on, which are not part of the public use data base and are not discussed here.

4.2.1 School Questionnaires

In both the base year and the first follow-up, principals and headmasters (or their designates) were asked to complete questionnaires asking for basic information on such institutional characteristics as type of control, ownership, total enrollment, proportions of students and faculty belonging to policy-relevant groups, participation in Federal programs, per-pupil expenditures, and so on. This information is stored primarily in a separate data file that may be easily merged with student data files or the course offerings file described below. In addition, approximately 19 of the most basic school characteristics have been stored on the student data files in order to facilitate the classification of students according to their school environment.

School questionnaires were sought from all 1,015 participating schools during the base year survey. In the first follow-up survey, school data were requested from those schools still in existence as independent institutions (i.e., that had not closed or merged with other schools), and that still had members of the 1980 sophomore cohort currently enrolled. Thus, no follow-up data were collected from schools that closed, merged with other schools, or had no tenth or twelfth grade during the base year survey. In a few instances when students from a base year school were transferred en masse to a different school, or when two schools within a district merged, school questionnaires were sought from the schools now attended by the sampled students. In such cases, data from the new schools were stored on separate school records in the HS&B School Questionnaire Data File, and were not physically merged with data for the original school. A link variable ("connecting school ID") is stored both in the record for each base year sample school that sent its students to a first follow-up "target school," and in the record for each "target school" indicating the ID of the base year school where the students were originally sampled and surveyed. Data from the new "target schools" can be merged easily with data records for the students who transferred in groups. No new school data were sought for students who transferred as individuals.

4.2.2 Teacher Comment Forms

Teacher Comment Forms were requested from all faculty members who had taught any HS&B sampled students during the 1979-80 academic year. These data were collected only during the base year survey. Teacher Comment Forms asked for perceptions about whether each selected student would probably go to college, was working up to potential, seemed popular with others, had talked with the teacher about school work or plans, seemed to dislike school, had enough self-discipline to hold a job, and had a physical or emotional handicap that affected school work. Data from these forms have been compiled into separate files with over 19,000 forms for each of the two student cohorts.

4.2.3 Course Offerings and Enrollments--Academic Year 1981-82

During the first follow-up only, school administrators were asked to provide materials that would allow the construction of a complete listing of all secondary level courses offered, complete with enrollment figures, for the 1981-82 academic year. This information was not requested in any prescribed format, but was accepted in a variety of forms. In many instances, schools were able to provide computer-generated printouts of Master Teaching Schedules. In others, it was necessary to merge information from several sources such as annotated course listings, catalogs, and enrollment records. Procedures were established to maximize the completeness and accuracy of these materials (see below). In the data file constructed from these documents, each school is represented by a block of records that indicate for each course offered a 6-digit course identification number, the duration and timing of the course (e.g., year-long, first semester, third quarter), the credits earned for successful completion, and the total number of students enrolled in the course during the entire 1981-82 academic year. This data set may be merged easily with the School Questionnaire file, the Student Data files, or the High School Transcripts file. In both the Course Offerings and Enrollments and the High School Transcripts files, individual courses were coded using the Classification of Secondary School Courses (CSSC) developed under an CS contract.

4.2.4 Data Collection Procedures--School-Level Data

In both the base year and first follow-up surveys, it was first necessary to secure a commitment from the administrator of each sampled school to participate in the study. In the case of public schools, the process was begun by contacting the Chief State School Officer (usually the state Superintendent of Schools) to explain both the objectives of the study and the data collection procedures (especially those for protecting individual and institutional confidentiality), and to identify the specific districts and schools selected for the survey.

Once approval was gained at the state level, contact was made with District Superintendents and finally, once district approval was granted, with school principals. Similarly, wherever selected private schools were organized into an administrative hierarchy (e.g., Catholic school dioceses), approval was obtained at the superior level before the school principal or headmaster was approached. Within each cooperating school, principals were asked to designate a School Coordinator who would serve as a liaison between the NORC High School and Beyond staff and the school administrator and selected students. The School Coordinator (most often a senior guidance counselor) handled all requests for data and materials as well as all logistical arrangements for student-level data collection on the school premises.

In the base year, the School Coordinator assisted in assembling the materials for student sample selection. In the first follow-up the coordinator (usually the same individual) reviewed the school sample and assisted in determining students' current enrollment status, and in locating current addresses for selected sophomore cohort school leavers (i.e., transfers, dropouts and students who graduated ahead of schedule) and senior cohort base year survey nonrespondents.

School questionnaires were sent to coordinators in the fall of 1979 for the base year survey and in the fall of 1981 for the first follow-up survey.

Student survey sessions were conducted between February and June of 1980 and 1982. In most cases, school questionnaires were completed and returned to NORC before the spring survey sessions. Most of the remainder were collected by NORC Survey Representatives who visited participating schools to conduct student survey activities. During the first follow-up, about one hundred additional school questionnaires were obtained in the fall of 1982, when schools were recontacted to supply student transcripts for a sample of 1980 sophomores. This additional contact with the schools also offered an opportunity to retrieve missing data from critical items in the school questionnaires.

In the base year, coordinators were asked to distribute some 67,000 Teacher Comment Forms to faculty members who might have taught HS&B sampled students during the 1979-80 academic year. Completed forms were returned to NORC in pre-addressed, prepaid envelopes by the teachers themselves.

During the first follow-up survey, coordinators were asked to assemble course offerings and enrollments data to be given to Survey Representatives at the time of the student survey sessions. Although nearly 90 percent of the schools provided course offerings information during the spring of 1982, the majority were not able to provide enrollment figures until the fall of that year, when the schools were recontacted for student transcripts. Substantial numbers of schools could not provide enrollment data at all.

Finally, School Coordinators were notified during the first follow-up data collection period that they would be recontacted the following fall for their assistance in conducting the Student Transcript Survey. Each coordinator was sent a packet of materials including a list of selected students and a reimbursement voucher to cover the costs of reproducing up to 36 (or 72 in the case of merged schools) high school transcripts for 1980 sophomores. (If selected students had transferred individually to schools not in the HS&B sample, transcript requests were sent directly to the principal of the last school the student attended.) Initial transcript requests were followed several weeks later by a combination of letters and telephone calls offering further assistance (remailing of packets, etc.) to each nonresponding school. Follow-up activities continued through January of 1983.

[a] Note: Of the 992 schools from which full participation was sought in the first follow-up, 975 were among the initial 1,015 that participated in the base year, and 17 were included because they received en bloc transfers of all students from base year HS&B schools. Of the 975 base year schools eligible for the first follow-up, school questionnaires were obtained from 956 or 98 percent.

[b] Transfer schools are defined as those to which 1,065 HS&B students had transferred as individuals.

[c] Of the 949 schools that responded, 4 were unable to furnish transcripts because the sampled students had received a GED only, and had not graduated.

[d] Of the 771 schools that responded, 115 were unable to furnish transcripts because sampled students had never registered, transferred again, dropped out before earning credits, etc.

collection efforts. (Completion rates cannot be calculated for Teacher Comment Forms due to the absence of information on the total number of faculty members who had taught HS&B sampled students during the base year.)

4.3 Student Data Collection

In the base year survey, a single data collection methodology--on-campus administration of questionnaires and tests to the entire sample of students from each selected school--was employed for both student cohorts. In the first follow-up, members of the younger cohort (nearly all of whom were then in the twelfth grade) were resurveyed using methods similar to those of the base year survey. Members of the 1980 senior cohort were surveyed primarily by mail. Nonrespondents to the mail survey (approximately 25 percent) were interviewed either in person or by telephone.

4.3.1 Base Year Data Collection

Base year student data were collected from students in 1,015 high schools between February 1 and May 15 of 1980. Sophomores and seniors within each school were gathered in separate groups on scheduled survey days, and completed the questionnaires and tests in one session. NORC Survey Representatives (often assisted by the School Coordinator) were present with each group to explain survey procedures and to answer questions. An Orientation Day was held in each school, usually one to two weeks prior to Survey Day, in order to inform sampled students about the objectives of the study and to brief them on the requirements of participation, the voluntary nature of the study, and the procedures for protecting the confidentiality of their responses. Efforts were made during orientation sessions to identify all twins and triplets selected into the

High School and Beyond sample and to recruit the participation of the non-selected twins and triplets in the study. Finally, a check was made during the orientation to see that parental permission forms had been obtained for all selected students in each school or district where this step was required.

The first step for students in each survey session was to complete a Student Identification Pages (SIP) booklet, which requested information about how the student might be located if selected for future follow-up. To preserve student confidentiality, these documents were handled, shipped, and stored separately from all other student instruments. The latter section of the SIP booklet contained several questions designed to identify students who had been exposed to non-English languages outside of formal school courses. Students having such exposure then answered a special series of questions about their use of and proficiency in the non-English language, as well as their bilingual education experiences. These data were processed into a separate file containing responses from over 11,300 students.

Students were then given one hour to complete the questionnaires. During this time, Survey Representatives scanned the completed SIP booklets for missing or incomplete responses. At the end of the allotted time, questionnaires were collected. Students were given a ten-minute break, during which Survey Representatives reviewed the questionnaires for completeness. Further attempts were made to obtain any data missing from either the SIP booklets or the student questionnaires before students left the survey session.

The cognitive tests were administered following the completion of the questionnaires. Tests consisted of six timed segments. The Senior Test Booklet also included a series of items on student perceptions about the six sub-tests and how the student was feeling while taking the test.

When the testing was completed, students with incomplete SIP booklets or questionnaires were asked to remain so that missing data could be captured. For certain questionnaire items considered crucial to the analytical objectives of the study, students were given the option of marking a special oval in the question field indicating that they did not wish to answer.

Following the survey session, NORC Survey Representatives made arrangements with School Coordinators to conduct make-up sessions for students who were not able to attend the first Survey Day. Survey Representatives then packaged all completed student questionnaires and test booklets for shipment to NORC's optical scanning subcontractor for the conversion of student responses to machine-readable form. Student Identification Pages, parental permission forms (if any), and administrative documents were returned to NORC's central offices for processing and storage.

Table 4.3.1-1 displays separately for each student cohort the numbers and percentages who completed base year questionnaires and tests.

4.3.2 First Follow-Up Data C[illegible] 1980 Senior Cohort

Questionnaire data were c[illegible] from members of the senior cohort between February and June of 1982. During the fall of 1981, packets were sent by mail to all sample members, containing an HS&B Newsletter that described selected base year survey results and plans for the 1982 follow-up, as well as a request to return a form confirming or updating name and address information provided at the time of the base year survey. As a result of mail returns and follow-up efforts by NORC staff, current mailing addresses were compiled for all but approximately 200 members of the senior cohort first follow-up sample by the end of January 1981. These 200 were nearly all base year nonrespondents.

During the second week of February, a second packet was mailed to all members of the senior cohort for whom current addresses had been obtained. This packet contained a letter explaining the first follow-up study objectives, general instructions for filling out the survey instrument, a 47-page 1980 Senior Cohort First Follow-Up Questionnaire (reproduced in appendix A), a soft-lead pencil for marking responses in the form, a respondent fee check in the amount of five dollars, and an addressed, prepaid envelope for returning the completed questionnaire to NORC. Ten days after the initial mailing, a postcard was sent to all cohort members expressing thanks to those who had returned completed forms and repeating the request to those who had not yet responded.

Additional follow-up efforts were undertaken five weeks after the initial mailing. By this time, over 6,100 completed senior cohort questionnaires had been returned. The remaining 6,100 nonrespondents were assigned to 300 NORC Survey Representatives at HS&B sample locations who initiated follow-up telephone calls to encourage senior cohort members to complete their questionnaires and return them by mail. This early contact with sample members allowed NORC to diagnose a variety of problems such as lost materials, questionnaires not received, recent address changes, and so on, and to take corrective action appropriate to each specific situation. The first round of telephone prompt calls took approximately two weeks to complete. Four weeks after the telephone follow-ups were begun, the number of completed forms received had risen to approximately 7,300 (about 60 percent of the first follow-up senior cohort sample).

Second telephone reminder calls were initiated on April 14, 1982. During these calls, Survey Representatives assessed whether or not sample members were likely to complete the questionnaire and to return it by mail. When it was considered unlikely, the Survey Representative attempted to complete the interview over the telephone. In all such instances, Survey Representatives asked telephone interview respondents to keep a copy of the questionnaire in front of them. In this way, respondents could read all survey items and response categories for themselves. The Survey Representative's role was thus limited to that of assisting the respondent to understand question wording and instructions, follow any routing directions (skip patterns), record the answers on his or her own copy of the questionnaire, and return the form to NORC offices. The second round of telephone reminders was completed by May 8, 1982 and resulted in the completion of an additional 1,000 questionnaires by mail and telephone, bringing the total to just under 8,300 responses (68 percent of the sample).

By the middle of May, HS&B Survey Representatives began extensive tracing efforts in order to reach all remaining nonrespondents and persuade them to return questionnaires by mail or else to participate in either telephone or in-person interviews. By the end of the field period, questionnaire data had been obtained from 11,227 senior cohort sample members (94 percent of the total), and from an additional 192 non-selected co-twins of sampled students (94 percent of the augmentation twins retained in the first follow-up). Table 4.3.2-1 displays the numbers and percentages of senior cohort sample members in each of six administrative disposition categories, broken down by major sampling strata for the first follow-up. Data for about 75 percent of the total sample (80 percent of the completed cases) were collected by means of self-administered questionnaires returned

through the mail. About 8 percent of the total (9 percent of completions) were interviewed over the telephone, and approximately 11 percent were interviewed in person by Survey Representatives. On the senior cohort tape, the variable called FEMETHOD indicates the method of administration for each completed questionnaire.

4.3.3 Second Follow-Up Data Collection--1980 Senior Cohort

Data collection activities were similar to those used in the first follow-up and began with mailing an address update letter to sample members of both HS&B cohorts on November 23, 1983. The address update packet included a cover letter, address update form, return envelope, and newsletter. In December, trained telephone interviewers at NORC's Central Office began locating activities for the cases whose letters were returned as undeliverable. By the time the questionnaires were mailed, addresses had been found for all but about 300 survey members (of both cohorts) whose locating letters had been returned by the Post Office as undeliverable. These 300 cases then were sent to field interviewers for further locating attempts.

Second follow-up questionnaires were mailed to members of the senior cohort between February 13 and 17, 1984. Along with the questionnaire, respondents received a cover letter, an instruction sheet, a place marker, a pencil, a response incentive check for five dollars, and an addressed, prepaid envelope for returning the questionnaire to NORC. (Appendix A contains a copy of the questionnaire.)

By the end of the third week, 37.1 percent of the seniors had returned their questionnaires. In order to obtain useful information on the effectiveness of "Thank you/Reminder" postcards in boosting response rates, two different postcard mailings were scheduled. At the end of the third week, half the sample was sent a postcard, thanking them for sending in the questionnaire or encouraging them to do so. At the end of the seventh week, those respondents who had not yet mailed in their questionnaires received a telephone reminder followed by a postcard. Completion rates were compared at the end of week ten. Among the respondents who had received the reminder at the end of the third week, 56.9 percent had returned their questionnaires. Only 53.3 percent of the second group returned their questionnaire. Hence, mailing the postcard at the end of the third week appeared to boost the response rate by about 4 percentage points.

Remaining telephone prompts began at the beginning of the sixth week. At that time, 43.6 percent of the senior cohort had returned completed questionnaires. Compared to the first follow-up, many more sample members were found to be temporarily unlocatable at this stage of data collection. They had either moved since the fall locating letter was sent out or had failed to report any change of address. Therefore, Survey Representatives spent considerable time obtaining additional locating information in order to trace nonrespondents.

During week nine, telephone and personal interviews began. At this time, 7,926 or 58.3 percent of the questionnaires had been received. Telephone and personal interviews continued into the month of August 1984, at which time the field period was closed. The final number of completed questionnaires for the 1980 seniors in the probability sample was 10,925 or 91.1 percent of the sample (excluding non-sampled co-twins). Table 4.3.3-1 displays the completion rates by sampling strata. Over 73 percent of the sample (80 percent of the respondents) completed and sent in questionnaires without assistance (self-administered); 13 percent (14.4 percent of respondents) were interviewed by telephone, and 4.8 percent (5.3 percent of respondents) were interviewed in person.

5. DATA CONTROL AND PREPARATION

Data control and preparation refers to a series of procedures governing the preparation of completed questionnaire data for conversion to machine readable form by optical scanning. The process involves monitoring the receipt of completed documents from respondents and the field interviewing staff; editing completed instruments for missing information and proper adherence to routing or skip instructions; assigning numeric codes to responses such as schools attended, occupations, military specialties and so on; retrieving missing information and resolving inconsistencies in responses to specified questions; and validating a percentage of the interviews conducted in person or by telephone.

5.1 Base Year Procedures

The procedures for data control and preparation were significantly different in the base year as compared with the first and second follow-ups. Since the base year student instruments were less complex than the follow-up questionnaires (for example, they employed no skip patterns and required no open-ended coding), the completed documents were sent by NORC Survey Representatives directly from the schools to the scanning subcontractor, Westinghouse Learning Corporation. The scanning computer was programmed to perform the Critical Item Edit (described below) and to produce reports that identified the critical items with missing information for each case. The reports were sent to NORC, where data retrieval was completed. (The Base Year Teacher Comment Forms were also sent directly to optical scanning, but no data retrieval was conducted.)

The base year school questionnaires and parent questionnaires were converted to machine readable form by the conventional key-to-disk method at NORC. In the base year, most school questionnaires were completed and returned to NORC before the scheduled Survey Day at the school; the remainder were collected by Survey Representatives during their Survey Day visits. This sequence permitted collection of missing school questionnaire data for most institutions during the course of scheduled survey activities, obviating the need for additional contact with school officials.

5.2 First Follow-Up Procedures

5.2.1 Shipping and Receiving Documents

All documents shipped to NORC from the field (e.g., the sophomore questionnaires and tests completed on Survey Day in the schools), and all of the instruments shipped from NORC to the optical scanner (Westinghouse Information Services, formerly known as Westinghouse Learning Corporation), were accompanied by a detailed transmittal form that listed each case in the shipping carton. Upon arrival at NORC, the contents of each carton were thoroughly inspected by the receipt control supervisor. Documents were assigned disposition codes which characterized the completion status for each case in terms of both respondent type and the presence or absence of relevant materials. Any discrepancies were resolved with the appropriate Survey Representatives or Field Managers within a 24-hour period. Data control disposition codes were then entered into the in-house processing segment of NORC's Automated Survey System (NASS), and routed to the appropriate processing station. Additional updates were made to the NASS record for each case as remaining procedures (editing and coding, data retrieval, interview validation) were completed. A final entry into the NASS record was made when the case was processed for shipment for optical scanning. The transit of large shipments of edited instruments to WIS was safeguarded by the use of Brinks Incorporated, which provided portal-to-portal secure delivery.

5.2.2 Editing, Coding, and Retrieval

A staff of 16 coder/editors handled over 40,000 student questionnaires (both cohorts) and nearly 1,000 school questionnaires. Editors and coders were trained for one week, followed by a 100 percent review of the first 40 cases edited by each trainee. Those not performing satisfactorily were either terminated or retrained, depending upon the severity of the problem.

The first data preparation step for each completed document was the Critical Item Edit. (The large sample and lengthy data collection instruments of High School and Beyond made 100 percent editing of each questionnaire infeasible.) A list of approximately forty items in each of the major survey instruments were designated as "critical" or "key" items (see appendix B). Items were so designated if they were deemed to be crucial to the methodological or analytical objectives of the study. Most of the key items are of self-evident policy relevance; others were chosen as a means of checking whether survey respondents had properly followed routing instructions, or whether they had inadvertently skipped portions of the questionnaires. Cases were deemed to have failed the Critical Item Edit if the respondent did not provide a codeable response to any single key item. Thus, omissions, illegal multiple responses and vague, unclear responses were grounds for failure. In each document, items failing the edit were flagged and the document was routed to the data retrieval station, where respondents were called by telephone to obtain missing information or otherwise resolve the edit failure. The proportion of senior cohort questionnaires requiring data retrieval was 46.3 percent.

In addition to the Critical Item Edit, the following coding tasks were performed:

1. Occupation and industry were coded according to the U.S. Department of Commerce, Bureau of the Census, Classified Index of Industries and Occupations 1970, and the U.S. Department of Commerce, Bureau of the Census, Alphabetical Index of Industries and Occupations 1970. The 1970 edition was used so that the coding in High School and Beyond would coincide with that used on NLS-72. The codes can be found in appendix C.1.

2. Postsecondary schools were coded using six-digit FICE codes. The directories included the CS Directory of Postsecondary Schools with Occupational Programs, 1975-76 and the CS Education Directory, Colleges and Universities, 1981-82. Codes were created for unique schools not listed in these directories. The FICE codes and the created codes are located in appendix C.2.

3. Military codes for specialized schools, specialty and pay grade were classified according to the Department of Defense, Occupational Conversion Table, Enlisted 1974. A copy of this edition was obtained from Research Triangle Institute, so that High School and Beyond military coding would be compatible with that used for NLS-72. The military codes are located in appendix C.3.

4. The major field of study indicated for each postsecondary school attended was converted to a six-digit code using the HEGIS Taxonomy. The directories used included: HEW, CS, A Taxonomy of Instructional Programs in Higher Education, 1970; CS, Standard Terminology for Curriculum and Instruction in Local and State School Systems (Handbook IV); and HEW, Vocational Education and Occupations, 1969. These directories were also used for field of study coding on NLS-72. The field of study codes are located in appendix C.4.

5. To ensure compatibility, the various licenses, certificates and other diplomas received by respondents were coded according to two-digit values created for NLS-72. These codes are located in appendix C.6.

6. Numerical responses were transformed to darkened ovals to facilitate optical scanning.

In general, the questionnaire used for the 1980 senior cohort contained many more open-ended questions than did that used for the sophomore cohort. An exception was the instrument completed by 1980 sophomores who left school without graduating, which included many of the employment-related items from the senior cohort questionnaire. Thus, senior questionnaires took an average of 16.4 minutes to edit and code, while instruments from sophomores still attending their same base year school required an average of 10.9 minutes for editing and coding; questionnaires from sophomores no longer attending their base year high schools averaged 19.4 minutes.

5.2.3 Validation

Interview validation requires the recontacting of selected respondents in order to repeat the collection of specified data. Data from validation calls (conducted from the central office) are then compared with data collected by Survey Representatives through personal or telephone interviews. Discrepancies in the two data sources are investigated and, if not resolved, the respondent is re-interviewed. Further validation is then conducted for an interviewer whenever validation failure occurs, and follow-up action is taken as appropriate.

Since the process of validating an interview also requires a phone call to the respondent, cases requiring both validation and retrieval were handled in a single call to lessen impositions on the respondent's time. As noted earlier, approximately 10 percent of the instruments completed in person or by telephone were validated. No cases were found to fail validation checks in the first follow-up.

5.3 Second Follow-Up Procedures

5.3.1 Shipping and Receiving Documents

Respondents and field interviewers mailed questionnaires to NORC offices in Chicago. Arriving documents were separated by disposition codes which identified completed cases by method of administration (i.e., self-administered, telephone interview, or personal interview). These disposition codes were then entered into NORC's Automated Survey System (NASS). As cases were routed through the data preparation system, an additional in-house update was made to the NASS record as each editing, coding, and retrieval procedure was completed. Codes designating validation cases were also entered, and a final entry into the NASS record was made when the cases were processed for shipment to the scanning contractor. As in the first follow-up survey, a detailed transmittal listing every case in each carton accompanied the instrument shipment to the optical scanning firm.

5.3.2 Editing and Coding

A staff of 12 coder/editors processed nearly 26,000 student questionnaires (both cohorts). Coder/editors were trained for 1-1/2 days. After a 100 percent review of the first 20 cases, coders not meeting quality control standards were either reassigned or retrained.

As in the first follow-up, the Critical Item Edit was the first data preparation step to be completed. A list of 37 items in each survey instrument were designated as "critical" or "key" items (see appendix B for the list of critical items).

The second follow-up survey marked the first time that respondents entered and filled in optically scannable grids for all of their answers to numeric questions. Therefore, in addition to the Critical Item Edit, all numerical responses were examined for correct entry (e.g., right justification, omission of decimal points).

Other data preparation tasks included coding occupational and industrial information and licenses and certificates, using the same reference sources described above for the first follow-up survey.

Military specialized schooling, specialty, and pay grade were coded utilizing an updated Department of Defense (DoD) coding scheme, Occupational Conversion Table, Enlisted/Officer/Civilians (December 1982). However, each DoD officer code, a numerical value followed by an alphabetical value, had to be converted to a three-digit number. To make the conversion the numerical value of the officer DoD code was entered in the first column, followed by a two-digit numerical value corresponding to each letter of the alphabet (01-26). To ensure that officer codes are not mistaken for enlisted codes, a "flag" has been placed at the beginning of each respondent file where an officer code is present. Coast Guard training and assignments received appropriate Navy codes, a procedure used by the Defense Manpower Center.

Coding of the names of postsecondary schools attended by respondents was accomplished by using the CS Education Directory, Colleges and Universities, 1982-1983 and an updated source for vocational school programs, the CS Directory of Postsecondary Schools with Occupational Programs, 1982. As in the first follow-up, codes were created for new schools not listed in these directories. The field of study information was coded using A Classification of Instructional Programs (CIP). Produced by CS in 1981, this directory replaces A Taxonomy of Instructional Programs in Higher Education (HEGIS Taxonomy, 1972) and the Standard Terminology for Curriculum and Instruction in Local and State School Systems (known as

Handbook VI), which were used in the first follow-up. To provide continuity between the first follow-up and the second follow-up education data, appendix C.5 contains crosswalks between the HEGIS Taxonomy and the CIP, and between Handbook VI and the CIP.

Due to the similarity of the second follow-up senior and sophomore questionnaires, coding times were comparable and averaged 9.7 minutes. This represented a decrease in coding time of almost 50 percent compared with the coding of the first follow-up self-administered questionnaires. The reduction in coding time was achieved by having respondents enter numerical data directly to optically scannable grids. (In the first follow-up, respondents were instructed to enter numbers, and coders later transferred the numbers into optically scannable grids.) As a result, coder/editors had to review respondent-filled grids and make corrections only when necessary.

5.3.3 Data Retrieval and Validation

The proportion of cases requiring missing data retrieval or other fail-edit callbacks for each cohort was similar: 29.1 percent for the elder cohort and 32.5 percent for the younger cohort. The retrieval rate for the senior cohort was 11 percentage points lower in the second follow-up survey than in the first follow-up. Some questions requiring frequent retrieval during the first follow-up were not included in the second, and a number of relatively minor changes in item formats also improved response rates and the clarity of responses for designated Critical Items.

Interview validation requires that selected respondents be contacted a second time to assure the quality of information collected by field interviewers. For a description of validation procedures, see section 5.2.3. During the second follow-up, field supervisors conducted validation interviews with 10 percent of the respondents who had been interviewed on the telephone or in person. The data collected were then compared to questionnaire data. As in the first follow-up, no cases failed validation checks.

6. DATA PROCESSING

Data processing activities span the entire length of each of the HS&B surveys, beginning with pretest activities, continuing with maintenance of the respondent locator database, and concluding with machine editing and the preparation of public use data tapes. Data processing activities in the base year and in the first and second follow-ups will be discussed together.

6.1 Maintenance of Longitudinal Locator Data Bases

The locator data base maintains the most up-to-date name and address information available for each sample member as well as information from previous waves. During each wave, respondents have completed a separate locator page, which requested their name and address, their spouse's name, their parents' names and address(es), and the names, addresses, and relationships of two other people who are likely to stay informed of the respondent's whereabouts. The locator page also requested information regarding birth date, sex, and social security number. To assure confidentiality, all locating information is stored on secure files which are separate from the questionnaire data.

Since three surveys have been completed and since birth date and sex are also provided elsewhere in each questionnaire, several independent sources of locating and identifying information are generally available. This information is necessary for locating hard-to-find respondents, for verifying that a given ID number refers to the same individual across waves, and for constructing corroborated birthdate and sex composites (BIRTHMO, BIRTHDAY, BIRTHYR, SEX, and SEXCOMP).

6.2 Receipt Control Procedures

For all three waves, the NORC Automated Survey System (NASS) has been used to track survey activities. This system consists of a data file for each school and/or cohort that contains the respondent ID number, disposition codes, and other information. During the base year, the school NASS file was used to generate weekly summary reports that tracked refusal rates and patterns, completed survey days or delays, and the receipt of school-level documents (i.e., school questionnaires). NASS also generated customized calendars of scheduled school survey days for each NORC Survey Representative.

Weekly summary reports on the receipt of sophomore and senior questionnaires were produced during the base year and both follow-ups. Data control disposition codes were added to the NASS files, making it possible to track the internal movement of instruments through mail receipt, editing, data retrieval, validation, and shipment for optical scanning. The respondent-level NASS (receipt control) files were linked with the longitudinal locator database to produce interviewer assignment logs, to trace nonrespondents as of a certain date, and to produce reminder postcards. As noted in chapter 5, the NASS also generated the transmittal materials for shipping the prepared instruments to the optical scanning subcontractor.

At the end of each data collection period, a reconciliation between the files provided an accurate count of the number of survey participants and documents received. The reconciliation used three types of checks: check digits derived from a fixed mathematical formula that easily identified misread or miscopied student ID numbers, a comparison of the respondent's birth date, sex, and other identifying information against base year and first follow-up data, and a comparison of field transmittal forms against what the NASS records indicated had been returned from the field. All discrepancies were reported for review and resolution.

6.3 Optical Scanning

As discussed in earlier sections, the student questionnaires were optically scanned using equipment that read darkened ovals or marks on the page. NORC conducted extensive tests and checks of the machine's ability to read correctly the darkened ovals. An early test of 131 documents revealed that the mark sense threshold required adjustment. A second test of 90 documents was conducted, and a thorough audit of the results verified that satisfactory data conversion was being achieved.

In the base year, student instruments were limited to two versions (one per cohort) and the instruments contained only one logical branch or skip sequence for respondents to follow. Because of this simplicity, it was efficient for the optical scanning contractor to perform the critical item edit and convert blank fields to missing value codes at the time of completing the data conversion. The conversion of blanks to missing values was done according to instructions from NORC. The optical scanning contractor for all three waves has been National Computer Systems (NCS). (In the base year the company was called Westinghouse Learning Corporation, and during the the first follow-up, its name was changed to Westinghouse Information Services.)

For all three surveys, NCS created separate data files for the two cohorts. To check the accuracy of data conversion, NORC conducted an audit of a sample of cases, comparing the scanned and machine edited data files with the actual hard-copy questionnaires.

6.4 Machine Editing

In the base year, machine editing was limited to the examination of each data field for out-of-range values. Very few stray codes were discovered; appropriate missing value codes were assigned to these fields.

As noted in the section on optical scanning (6.3), base year questionnaires were designed so that only one explicit "skip" instruction appeared in the senior questionnaire (seniors not going on to college did not complete the last section on college education). There were no "skip" instructions in the sophomore questionnaire. Where two or more questions were related, the items following an implicit screening or filter question contained response options for those who were "screened" out by the filter question. No inter-item consistency checks were carried out on base year data files between the implicit filter questions and the related (dependent) items.

In the first and second follow-ups, several sections in the questionnaire required respondents to follow "skip" instructions. A case-by-case inspection of logical inconsistencies and stray codes was impractical due to the sheer number of cases and the fact that the pages of the questionnaires had been cut apart as preparation for data entry by optical scanning. Consequently, programs were written to automatically perform the inter-item machine edit checks. The tasks performed included resolution of inconsistencies between filter and dependent questions, supplying the appropriate missing data code for questions left blank, detecting illegal codes and converting them to missing data codes, and generating a report on the quality of the data as measured by the incidence of correctly and incorrectly answered fields and correctly or incorrectly skipped fields.

Inconsistencies between filter and dependent questions were resolved in consultation with NCES staff. In most instances, dependent questions that conflicted with the skip instructions of a filter question contained data that, although possibly valid, were not responsive to the intent of the dependent question. Data retrieval verified that when filter questions were answered correctly, the dependent questions which should have been skipped were often answered simply because they seemed to apply. During the machine editing process, inappropriate responses were expunged by turning them into blanks.

After improperly answered questions were converted to blanks, the student data were passed to a program which supplied the appropriate missing-data codes for blank questions. The program converted questions left blank according to several criteria. If a previous question had been answered in a way that required that the current question be skipped, a "legitimate skip" code was supplied. If not, a "missing data" code was supplied, except in the case of critical questions. Critical questions with missing data were flagged during data preparation, and attempts were made to obtain the information by telephone. If the respondent specifically refused to answer a question during the call-back, a special scannable oval was marked. Critical questions marked in this way were assigned a special code of "refused." Otherwise, critical questions were treated in the same manner as others. Finally, additional missing value codes for multiple-coded questions were supplied by the scanner.

Detection of out-of-range codes was completed during scanning for all questions except those permitting an open-ended response. For the hand-coded, open-ended questions (such as the 3-digit occupation and industry codes, or the 6-digit college and field-of-study codes), the data were compared to the list of valid codes, and invalid codes were converted to the "no answer" value. The numbers of invalid codes detected were negligible.

For measuring data quality, the machine-edit programs produced bar graphs that displayed the frequencies for the different situations recognized by the programs: questions properly answered, questions properly skipped (the "legitimate skip" code), questions skipped in error (the "no answer" code), and questions answered in error.

The treatment of inappropriately answered items (i.e., those a respondent was instructed to skip) relied on the results of the critical item editing procedure. With only one or two exceptions, screening or filter questions were designated as critical items. When respondents were inconsistent in answering these items, either by responding to items they were instructed to skip, or by failing to answer dependent questions related to the filter item, the case was classified as an edit failure. Telephone calls were used to obtain responses to items skipped in error. In addition, the results of these calls demonstrated unambiguously that inappropriate answers to filter-dependent items were universally caused by respondents' failure to comply properly with the routing instructions of the filter questions. Rather than skipping to the designated target question to resume their responses, these individuals attempted to answer each filter-dependent question that appeared to offer a reasonably suitable response category. On the strength of these findings, all filter-dependent responses entered in error were converted to the proper missing data values (i.e., the "legitimate skip" code).

6.5 Data File Preparation

In the base year, data for both cohorts were combined into a single dataset. To facilitate this, NORC reformatted the tape so that identical questions in both versions occupied the same tape positions in each file. In general, the data for both cohorts followed the order of the senior questionnaire. Items unique to the sophomore instrument were interspersed among the senior items so that sophomore data appeared in about the same order as in the questionnaire. Also, whenever necessary, the sophomore response category values were recoded to match those for the senior cohort.

Data for the first follow-up were merged with base year data and placed on two tapes, one for each cohort. After the second follow-up was completed, these data were merged with the base year and first follow-up files and also placed on two tapes.

A final task of each survey was the computation of composite variables. The base year composite variables were constructed to be compatible with those contained on the public use file for the National Longitudinal Study of the High School Class of 1972 (NLS-72). These composite variables and the ones created after the first and second follow-ups are discussed in chapter 7.

UIDE TO THE DATA FILES AND CODEBOOK

Since three waves of data are represented on the data tape, the analyst has the opportunity to use data from any single wave or to link data from one wave to another. In doing so, however, care must be taken to use the proper participation flags and weights so that conventional statistical packages function to produce accurate statistics. Therefore, as a preview to the description of the data files, we have included a set of suggestions that should be helpful to the analyst. This is followed by a complete description of the content and organization of the data files and a guide to the codebook.

In the section on the data files, the reader should pay particular attention to the classification variables, which have been specially constructed to streamline substantive analyses (see section 7.2.10 and appendix G). Since researchers often need to control for education level, family income, educational aspirations, SES, and so forth, CS and NORC have devoted considerable effort to constructing a set of classification variables which can be used for this purpose. The analyst thus has several important control variables at his or her disposal and has little need to undertake time-consuming and complicated variable construction.

7.1 Hints on Selecting Participation Flags and Weights

One of the first steps to take before running statistical analyses is to select the proper participation flags and weights. There are three participation flags, BYPART (tape position 8), FU1PART (tape position 9) and FU2PART (tape position 3577) that indicate whether a respondent participated in the base year, first follow-up, and second follow-up surveys, respectively. These flags should be used to select the subset of respondents who participated in the wave(s) the analyst intends to examine.

When used with the corresponding weights, appropriate population estimates can be produced. The corresponding weights are BYWT for BYPART, FU1WT for FU1PART, and FU2WT for FU2PART. If data from all three waves are to be used, then all three participation flags should be selected jointly and used with PANELWT3. This procedure will result in the selection of respondents who participated in all three waves of the survey and the production of appropriately weighted estimates.

Even if the analyst is running unweighted statistics, the participation flags should be used.

For example, to compute a weighted estimate of the proportion of students in the base year who checked "Math is interesting to me" (Question 8AC) in the questionnaire, one would take the following steps: (1) use the base year participation flag, BYPART, to select the 11,500 cases that participated in the base year; (2) invoke the appropriate weight, BYWT; and then (3) run frequencies for the variable BB008AC. Similarly, to compute a weighted estimate using data from the first follow-up questionnaire, one would: (1) use the follow-up participation flag, FU1PART, to select the 11,227 cases that participated in the first follow-up; (2) invoke the appropriate weight, FU1WT; and then (3) compute the estimate for the desired variable.

The reason for stressing the use of participation flags and weights is to assure that unweighted and weighted analyses are performed correctly by most computer packages. (See appendix H for specific examples using SAS.) If cases are not first selected using the participation flag, some packaged programs may include in the analysis cases with no data, thus giving erroneous bases for frequencies, cross-tabulations, variances, and so forth. Therefore, the analyst should always select cases first using the appropriate participation flag, and then do the analysis.

When student and school questionnaire data are used together, it is particularly important to select cases using the student participation flag. If the participation flag is not used, students who did not participate in the survey may be included in the analysis simply because there is school data on their record.

Although weights are covered in detail in chapter 3, a few words are warranted here. The second follow-up data files are designed to be used as weighted data sets in all kinds of analysis. The complex sample design of the three waves of the survey virtually ensures inaccurate results if the data are analyzed on an unweighted basis. Clustering, multi-stage selection, and disproportionate sampling all contribute potential bias and various degrees of unreliability, which can be avoided by using the weights provided to analyze specific subsets of the sample. The weights included on the file and data for which they are appropriate are displayed in table 3.2.2-1.

7.1.1 Packaged Statistical Programs

CS has responded to numerous questions over the years having to do with statistical analyses of High School and Beyond data and now routinely recommends the procedures outlined in appendix H, using SAS with HS&B data. Of course, SPSS and SPSS-X can also be used, and the data file contains the appropriate control cards for both packages. Users should be aware that SAS and SPSS-X are now interchangeable at many computer installations, and should contact their own facility to obtain the information necessary to create an SPSS-X file from SAS and vice versa.

7.2 Content and Organization of the Data Files

The senior student data file consists of 11,995 records. Each record is organized as shown in the record layout that appears as appendix D. The variables on the record are grouped into logical sets as discussed below. For the sake of brevity, each item of data is referred to by its SPSS (SPSS-X, SAS) variable name as defined in the SPSS, SPSS-X, and SAS control cards provided with the data file.

The second follow-up senior cohort data tape contains five related files. These are:

1) The raw data file, in the following order:
   a) Randomized ID number (positions 1-6)
   b) First follow-up flags and composites (positions 8-66)
   c) Base year questionnaire data (positions 212-1225)
   d) First follow-up questionnaire data (positions 1226-2373)
   e) Selected base year school items (positions 2375-2417)
   f) Second follow-up questionnaire data (positions 2418-3575)
   g) Second follow-up flags, composites, and weights (positions 3576-3755)
2) The record layout for the raw data file
3) SAS control cards
4) SPSS control cards for first follow-up flags and composites, for base year questionnaire data, for first follow-up questionnaire data, for second follow-up questionnaire data, and for second follow-up flags, weights, and composites
5) SPSS-X control cards

Technical specifications on tape density, record length, and so forth, are provided separately with each tape.

7.2.1 Identification Codes

The first variable on the file, ID (in tape positions 1-6, that is, "columns" 1 through 6), is a unique but randomized 6-digit student identification code. The second variable, SCHLID (1-4), is a unique but randomized school identification code composed of the first four digits of the student ID. SCHLID allows a user to link students with the school in which they were sampled during the base year survey.

7.2.2 Participation and Status Codes

BYPART (8), FU1PART (9), and FU2PART (3577) indicate whether the student was a participant (code=1) or nonparticipant (code=0) during the base year survey, the first follow-up survey, and the second follow-up survey, respectively. These variables also indicate whether base year, first follow-up, and second follow-up questionnaire data, respectively, are available for a student. (See section 7.1.)

The variable FUSTATUS (10) provides information about reasons for nonparticipation in the first follow-up. FUSTTYPE (11) is a student type indicator that applies to sophomores only; it takes the constant value "6" for all students on the senior data file.

7.2.3 Data Availability Flags

SRQFLAG (17), PARFLAG (19), and BYSCHDAT (21) indicate whether first follow-up senior questionnaire data, base year parent questionnaire data, and base year school questionnaire data, respectively, are available (code=1) or not (code=0) for a particular student. TWINFLAG indicates whether the respondent was identified as a twin or triplet.

7.2.4 School-Level Characteristics

These variables provide information about the student's school and were collected during the base year. SCHSAMP (23) classifies the school into one of nine sampling strata: (0) regular public, (1) alternative public, (2) Cuban Hispanic public, (3) other Hispanic public, (4) (not used), (5) regular Catholic, (6) Black Catholic, (7) Cuban Hispanic Catholic, (8) elite non-Catholic private, and (9) non-elite, non-Catholic private. SCHURB (24) classifies the student's school as (1) urban, (2) suburban, or (3) rural. SCHREGN (25) indicates in which of the nine U.S. Census divisions the school is located. (See also appendix G.)

7.2.5 Sampling Weights and Replicate Codes

The weights included on the second follow-up data file include Base Year Weight (BYWT), First Follow-Up Weight (FU1WT), Second Follow-Up Weight (FU2WT), Panel Weight (PANELWT3), Test Weight (TESTWT2), and Raw Weight (RAWWT). (See chapter 3 for a full description; also see section 7.1.)

Tests of statistical significance on these data should be carried out on a weighted basis and should take account of the design effect due to the complex sample design and weighting scheme. Exact standard errors and design effects (DEFF factors) and root design effects (DEFT factors) for proportions estimated on 30 variables are provided in section 3.2.3, which also contains guidelines on how to use these factors to calculate approximate standard errors that take into account the complex sample design.

The standard errors and design effects reported in section 3.2.3 were calculated using the method of balanced repeated replication (BRR). Users who have access to a BRR program can calculate exact standard errors and design effects for variables not included in section 3.2.3 using the replicate codes (REPCODE) included on the data file. These codes indicate the computing stratum (first 2 digits) and the half-sample (last digit, coded 1 or 2) to which each student in the sample belongs. The BRR program used to calculate these sampling errors is available upon request from CS.

7.2.6 Base Year Student Questionnaire Data

The base year senior questionnaire data are reproduced on the second follow-up data tape just as they appeared on the base year data tape. However, data are included only for the 11,995 seniors who were selected when a subsample was drawn prior to the first follow-up. Students selected for follow-up who did not participate in the base year survey will, of course, have no base year student questionnaire data. For ease of reference to the base year data file, the base year data in the second follow-up data file have been placed in tape positions 212 through 1,225, so that the tape position for any given base year variable is exactly 200 positions higher on the second follow-up file than on the base year file.

At the beginning of the student questionnaire data file (212 through 215) are four data indicators that show (1) whether data are available (code=1) or not available (code=0) on non-English language usage (LANGDATA); (2) whether the student chose to fill out the Spanish language version of the base year student questionnaire (SPANLANG); (3) whether base year test data are included on the file for this student; and (4) the grade level (sophomore=1, senior=2) of the student during the base year (GRADE). Note that the language questions are not on the second follow-up tape but are on the Language File (see appendix F).

Tape positions 231 through 811 on the senior file contain base year questionnaire data. Questions appear in the order of the Base Year Senior Questionnaire and use the SPSS variable names (mnemonics) established during the base year. Because the sophomore and senior base year questionnaires differ slightly from each other, gaps sometimes occur in the sophomore and senior records. Gaps appear in the senior record where a sophomore question has no corresponding senior question. (Similarly, gaps occur in the sophomore record where a senior question has no corresponding sophomore question). These anomalies are necessary in order to attain the more important goal of placing variables in the same relative positions on both the senior and sophomore records.

Tape positions 838 through 857 contain five psychological composites constructed during the base year. (See Information for Users, Base Year (1980) Data, NORC, 1980, the base year user's manual, for a description of how these were constructed.)

Tape positions 984 through 1,199 contain base year test score data while tape positions 1,200 through 1,225 contain (for the senior cohort only) information concerning attitudes about the areas of knowledge tested and about the test experience itself.

7.2.7 First Follow-Up Student Questionnaire Data (1980 Senior Cohort

The first data element in this section (FEMETHOD) indicates how the first follow-up questionnaire was administered: by mail (code=0); in group sessions (code=1); in person (code=2); by telephone (code=3). Following this, in tape positions 1227 through 2373, are data items from the first follow-up senior questionnaire, arranged in the order in which the items appeared on the questionnaire.

7.2.8 Selected Base Year School Data

Selected base year school questionnaire data are attached to the student record as contextual data about the school environment. These data are in tape positions 2375 through 2417 and include: number of students in the 10th and 12th grades; specialization of the school, if any; percent of the students and faculty who are black and Hispanic; percent of 1978-79 class now in regular college; percent of students who dropped out; participation in bilingual and other special programs such as Title I and Title VII; and legal ownership of the school.

7.2.9 Second Follow-Up Questionnaire Data (1980 Senior Cohort)

In tape positions 2418-3575 are data items from the second follow-up questionnaire, arranged in the order in which the items appeared on the questionnaire. One exception is that 60A (spouse's industry) and 60B (spouse's occupation) were reversed on the data file to be consistent with data from earlier waves.

7.2.10 Composite Variables, First and Second Follow-Up Surveys

Several of the composite variables and indices that were created for the first follow-up data files have been retained in their original form in positions 8-66 of the second follow-up data tape. Composite variables and indices that were created for the second follow-up are found in positions 3576-3755.

Composite variables were constructed using responses from two or more questionnaire items. In some cases, composites were constructed from dozens of variables or from variables from different databases, such as from the Bureau of Labor Statistics. All of the composite variables are described in detail in appendix G, where they are listed along with flags and weights in the order in which they appear on the tape. Most of the composite variables can be used as classification variables or independent variables in data analysis. For this reason, composite variables may be referred to as classification variables in this or other CS documents.

7.2.10.1 Demographic Variables

Many of the composite variables which were constructed were respondent demographic characteristics. SEX, SEXCOMP, RACE, and RACE2 are all examples. Since there were several sources of information on sex from the base year through the first follow-up, SEX was constructed to produce a variable with the least missing data and most agreement (respondents occasionally report this information inconsistently). SEXCOMP is simply a copy of the same variable within the second follow-up section. RACE and RACE2 also were constructed from several sources of information. Each one defines racial categories, especially Hispanics, a little differently.

Socioeconomic status can be determined from BYSES, BYSESQ, SES and SESQ. BYSES was constructed from base year data using father's occupation, father's education, mother's education, family income, and material possessions in the household. BYSESQ is simply the SES quartile to which the respondent belongs, and SES and SESQ are copies of the same variables in the second follow-up section.

Other demographic composite variables include high school region (HSREGION), urbanicity of the respondent's high school (HSURBAN), community type (COMTYPE), whether the respondent has children (CHLDFLAG), the language spoken in the home (HOMELANG), family size (FAMSIZE), family income (FAMINC), the highest level of education reported by either of the respondent's parents (PAREDUC), and whether the respondent's parents owned or rented their home (HOMEOWN).

Eight variables which were obtained from the Labor Department can be used as local area economic indicators. The presence of these variables provide a rare opportunity for linking educational characteristics and outcomes to economic circumstances. The economic indicators include county unemployment rates for 1980, 1981, and 1982 (CUNEMR80, CUNEMR81, CUNEMR82) for the county in which the respondent attended high school. Also furnished is county per capita personal income (CPCPI80, CPCPI81), and the average hourly wage in manufacturing (MWAGE80, MWAGE81, and MWAGE82).

7.2.10.2 Educational Variables

A composite score (BYTEST) covering the base year tests in vocabulary, reading, and mathematics was constructed for the first follow-up data tape. BYTESTQ is the quartile distribution of BYTEST. For the convenience of the user, these variables have been copied to the second follow-up section and are called TEST and TESTQ. Other indicators of achievement include high school grades (HSGRADES) and high school diploma (HSDIPLOM).

HSTYPE shows the type of high school the respondent attended--public, Catholic, and other private. HSPROG identifies whether the respondent participated in a general, academic, or vocational program.

HANDICAP indicates whether the respondent has ever reported a handicap, participated in a program for the handicapped, or received handicap benefits. This variable was constructed from data reported in all three waves.

The follow-up surveys gathered a great deal of information on participation in postsecondary education, and much of it is captured in the activity state variables for postsecondary education. These indicate for each respondent whether he/she was enrolled in some form of postsecondary education at various points after high school. For attenders, the variables identify whether the school was public or private, whether it was two-year or four-year, and whether the student was full-time or part-time. The activity state variables are called PSESOC80, PSESFE81, PSESOC81, PSESFE82, PSESOC82, PSESFE83, PSESOC83, and PSESFE84. As the labels indicate, the variables point to each October and February, from October 1980 to February 1984.

Additional information was added to the data files from the HEGIS directory and the Directory of Postsecondary Schools with Occupational Programs. TUITION1, TUITION2, and TUITION3 indicate the amount of tuition charged by colleges and universities which respondents reported attending. For respondents attending vocational schools, VOCNTRL1, VOCNTRL2, and VOCNTRL3 indicate whether the school was public or private and two-year or four-year.

7.2.10.3 Psychological Scales

Five psychological scales were constructed from various attitude items included in the first follow-up questionnaires. These scales are intended to measure self-concept (FECONCPT), locus-of-control (FELOCUS), work orientation (FEWORK), family orientation (FEFAMILY), and community orientation (FECOMMUN). Each composite scale is the average of the standardized scores of the questionnaire items of which it is composed. For a list of the component items and the construction procedures, see appendix G.

7.2.10.4 Employment Status

There are eight activity state variables for employment status (JOBSOC80, JOBSFE81, JOBSOC81, JOBSFE82, JOBSOC82, JOBSFE83, JOBSOC83, and JOBSFE84). These variables indicate for each October and February, from October 1980 through February 1984, the employment status of the respondent. Each respondent is characterized as working full-time, working part-time, unemployed, or not in the labor force.

7.3 Guide to the Codebook

The codebook provides a comprehensive description of the student data file. For each variable on the tape the codebook provides the following information, referenced in figure 7.3 by the number in parentheses following each item:

- --a question number for cross-reference to the questionnaire (1)
- --the tape position of the variable (2)
- --the variable format (3)
- --the SPSS (or SAS) variable name (4)
- --the SPSS (or SAS) variable label (5)
- --for questionnaire items, the exact question wording and original response categories (6 & 7)
- --for composite variables, the constructed category values (7)
- --data codes for all response categories (8)
- --unweighted frequency counts (9)
- --unweighted, unadjusted percentage frequencies (10)
- --weighted "valid cases" percentage frequencies (11)
- --reserved codes (12)

Explanations:

Question number (item 1 in figure 7.3): For variables taken directly from questionnaires, this is the question number in the original document. Composite variables and other items such as flags have been assigned question numbers that serve to indicate the type or source of the variable.

Tape position (item 2 in figure 7.3): This item gives the starting and ending tape position for each variable on the data tape.

Variable format (item 3 in figure 7.3): This item indicates the type of variable, its width, and the number of decimal points, if any.

SPSS (SAS) variable name (item 4 in figure 7.3): Each variable on the data tape is identified by a unique SPSS variable name. Data indicators (such as flags and status codes) and composite variables are given mnemonics that help identify them, for example, SCHLID for "school identification code" and BYSES for "base year socioeconomic status composite." Student questionnaire items and school questionnaire items have names that begin with a two-character code that identifies the cohort and wave to which the item belongs, for example, FE25A. These codes and their meanings are as follows:

YB = younger (sophomore) cohort questionnaire, base year

EB = elder (senior) cohort questionnaire, base year

BB = both (senior and sophomore) cohort questionnaires, base year

FY = first follow-up, younger cohort, student questionnaire

FD = first follow-up, younger cohort, dropout questionnaire

FT = first follow-up, younger cohort, transfer student supplemental questionnaire

FG = first follow-up, younger cohort, early graduate supplemental questionnaire

FE = first follow-up, elder cohort questionnaire

SB = school questionnaire, base year

SY = second follow-up, younger cohort questionnaire

SE = second follow-up, elder cohort questionnaire

For student or school questionnaire items, positions 3 through 8 of the variable name indicate the original question number and its subparts.

Two special variables begin with a four-character code:
(1) postsecondary education activity state variables begin with PSES, and
(2) employment activity state variables begin with JOBS.

The user should be careful always to refer to the variable by its SPSS (SPSS-X, SAS) variable name in any computing procedures, rather than by its question number, which may be a mnemonic very similar to the variable name.

SPSS (SAS) variable label (item 5 in figure 7.3): A short variable label appears after the variable name. This label is the same as that which appears on the SPSS (SAS) data definition cards included on the tape.

Original question wording (item 6 in figure 7.3): For questionnaire items, this provides the exact question wording as it appeared in the original document.

Response categories (item 7 in figure 7.3): This item provides either the original response categories (in the case of questionnaire items) or the recoded or constructed response categories for composite variables and data indicators, such as flags. For display in the tables, continuous variables have been recoded to collapse all valid values into a single response category. This allows the codebook tables to show the frequency counts, unweighted percentages, and adjusted weighted percentages for continuous variables without printing each distinct value that the variable can take.

Response codes (item 8 in figure 7.3): This item provides the actual numerical codes that appear on the data tape in the tape position specified (except for continuous variables where the actual values that appear on the tape have been recoded to produce the frequency counts and percentages). Certain codes, discussed below, are reserved to indicate missing data, legitimate skip, and so forth.

Frequency counts (item 9 in figure 7.3): This item shows the unweighted frequency counts for all records that were processed, including records that have missing data codes, legitimate skips, and so forth. Note, however, that the unweighted totals vary: 11,995 cases for variables such as ID code and participation flags; 11,500 cases for base year variables;

11,227 cases for first follow-up variables and 11,995 cases for selected base year school questionnaire variables. These different bases reflect the fact that these frequencies were produced using (a) no participation flag (11,995 cases), (b) selecting on BYPART (11,500 cases), (c) selecting on FU1PART (11,227 cases), and (d) no participation flag (11,995 cases).

Unweighted percentage frequencies (item 10 in figure 7.3): This column displays the frequency counts of item 9 as percentages. All records that were processed are included.

Weighted "valid cases" percentage frequencies (item 11 in figure 7.3): This column displays the weighted frequency of those cases that are "valid," that is, excluding those records that have been assigned reserved codes.

Reserved codes (item 12 in figure 7.3): In this dataset certain codes termed "reserved codes" have been chosen always to stand for certain situations. These codes and their interpretations are:

6 = multiple punch .... more than one response where only one response was called for

7 = refusal .... respondent refused to answer an item, either at the time of questionnaire administration or telephone follow-up. This value is available only for questionnaire items designated as critical for analysis.

8 = missing data .... data that should be present for this respondent is missing, but respondent did not necessarily refuse to provide data

9 = legitimate skip ...... either because of responses to preceding filter questions or because of other respondent characteristics, data for this item should not be present for this respondent; that is, the data is legitimately missing

These reserved codes correspond identically to those used in NLS-72 and in the two previous waves of the High School and Beyond study. The codes as listed above apply to variables with single-column data fields. For variables with fields greater than one column, the leftmost columns are filled with 9s (e.g., 96, 996, 9996).

In addition, there are three other missing value codes that apply to some variables:

93 = insufficient data .... for activity state variables only; no data is available to indicate either activity or inactivity for any part of the time period of the variable (PSE and job activity state variables are contained in appendix G.)

4 = don't know .... the respondent did not neglect to respond to this question nor did he/she refuse to answer; instead, the respondent stated that the necessary information was not available

5 = uncodeable verbatim .. the written response was too unusual to be categorized OR the response was unintelligible or illegible

As with the other missing value codes, the field is 9-filled if it is more than one column wide.

The following questions ask about your school finances for the two time periods of (a) Fall 1980 through Summer 1981, and (b) Fall 1981 through Summer 1982. Please make sure you answer each question for both periods. If you are unsure about the actual amounts for a particular item, give your best estimate. Please estimate all of your school-related expenses (such as tuition, fees, books, supplies, transportation to classes, etc.) through the end of next summer.

Question 43

Considering the time periods of Fall 1980 through Summer 1981, and Fall 1981 through Summer 1982, what is your estimate of how much it cost you (or will cost you) for tuition and fees to go to school, regardless of who paid? Estimate the amounts and record them below. Do not include cost after Summer 1982. Enter a zero, "0", where you had no expenses. (WRITE IN AMOUNTS)

Question 17

Next we would like information about all of the schools you have attended between March 1982 and the end of February 1984

IMPORTANT INSTRUCTIONS

There is room to provide information about three schools. At Q.18 write the name of the school you were attending on March 1, 1982. If you were not in school at that time, enter the name of the first school you attended after March 1, 1982. Answer parts A-K of Q.18 about that school. Provide information about the next school you attended at Q.19, and so on.

IF YOU ATTENDED MORE THAN 3 SCHOOLS: Provide information about the first and second schools you attended in Q.18 and Q.19. At Q.20 provide information about the most recent school you attended.

IF YOU ATTENDED TWO SCHOOLS AT THE SAME TIME: Provide information about both schools but use a separate question (page) for each.

WORK EXPERIENCE

In this section, we would like to find out about the jobs you have held, particularly in the period between March 1982 and February 1984. Include full-time jobs, part-time jobs, apprenticeships, on-the-job training, military service and so on.

We are interested in learning about the kinds of jobs you have held, the hours you worked and your income from these jobs, the level of your job satisfaction, and the relation of your training and education to your work experience. This information will help us better understand the movement of young people into the world of work and the reasons for changes in job situations.

Question 46

Tape Pos. 3052
Format: I1

SE46 = HELD ANY JOB BETW MARCH 82 AND FEB 84

Between March 1982 and the end of February 1984, did you hold a full-time or part-time job of any kind? This includes PAID jobs, VOLUNTEER jobs, working WITHOUT PAY on a family farm or business or being in the MILITARY. (MARK ONE)

Next we would like information about all of the jobs you had between March 1982 and the end of February 1984. We would also like to know about the periods of time you were between jobs and looking for work.

IMPORTANT INSTRUCTIONS

There is room to discuss four jobs. At Q.47 enter the job you held on March 1, 1982. If you had no job at that time, enter the first job you held after March 1, 1982. Answer parts A-L about that job. Enter your next job at Q.48 and so on.

IF YOU HAVE HAD MORE THAN 4 JOBS: Enter the first three jobs in Qs.47 to 49 and then enter your most recent or current job in Q.50.

IF YOU HELD TWO JOBS AT THE SAME TIME: Enter both jobs but enter them on separate pages.

IF YOU HAVE BEEN IN THE MILITARY: Please consider your entire military experience as one job.

HIGH SCHOOL AND BEYOND

High School and Beyond is sponsored by the National Center for Education Statistics, an agency of the United States Department of Education.

Thank you for accepting our invitation to participate in HIGH SCHOOL AND BEYOND. This is a voluntary but important national survey. We are pleased that you have agreed to participate. Your cooperation and participation will help us learn more about the experiences of high school students and their plans for the future.

All information which would permit identification of the individual will be held in strict confidence, will be used only by persons engaged in and for the purposes of this survey, and will not be disclosed or released to others for any purposes except as required by law.

NCES Form 2409-07

As a matter of policy, the National Center for Education Statistics is concerned with protecting the privacy of individuals who participate in voluntary surveys. We want to let you know that:

1. Section 406 of the General Education Provisions Act (20-USC 1221e-1) allows us to ask you the questions in this questionnaire.
2. You may skip any question you do not wish to answer.
3. We are asking you these questions in order to gather information about what happens to students as they move out of high school and make decisions about post-secondary education and work.
4. Your responses will be merged with those of other students, and the answers you give will never be identified as yours.

HIGH SCHOOL AND BEYOND

High School and Beyond is sponsored by the National Center for Education Statistics, an agency of the United States Department of Education.

Thank you for accepting our invitation to participate in HIGH SCHOOL AND BEYOND. This is a voluntary but important national survey. We are pleased that you have agreed to participate. Your cooperation and participation will help us learn more about the experiences of high school students and their plans for the future.

All information which would permit identification of the individual will be held in strict confidence, will be used only by persons engaged in and for the purposes of this survey, and will not be disclosed or released to others for any purposes except as required by law.

NCES Form 2409-03

As a matter of policy, the National Center for Education Statistics is concerned with protecting the privacy of individuals who participate in voluntary surveys. We want to let you know that:

1. Section 406 of the General Education Provisions Act (20-USC 1221e-1) allows us to ask you the questions in this questionnaire.
2. You may skip any question you do not wish to answer.
3. We are asking you these questions in order to gather information about what happens to students as they move out of high school and make decisions about post-secondary education and work.
4. Your responses will be merged with those of other students, and the answers you give will never be identified as yours.

GENERAL INSTRUCTIONS

PLEASE READ EACH QUESTION CAREFULLY.

HIGH SCHOOL AND BEYOND

1980 SENIOR COHORT
FIRST FOLLOW-UP QUESTIONNAIRE

Dear Participant:

Thank you for accepting our invitation to continue your participation in High School and Beyond. Through completion of this questionnaire, valuable information obtained from young people themselves can be used by policymakers to improve the education system for future students. Their goal is to prepare students for productive and meaningful roles in an increasingly complex and changing society.

Prepared for
THE NATIONAL CENTER FOR EDUCATION STATISTICS
by
THE NATIONAL OPINION RESEARCH CENTER

ED(NCES) Form No. 2409-33

The Federal Privacy Act of 1974 requires that each survey respondent be informed of the following:

(1) This survey is authorized by law (20 USC 1221e-1). While you are not required to respond, your cooperation is needed to make the results of this survey comprehensive, accurate, and timely.

(2) You are subject to no penalty for not providing all or any part of the requested information.

(3) The purpose for which this information is to be used is to provide statistics on a national sample of students as they move out of the American high school system into the critical years of early adulthood and relate these statistics to postsecondary educational costs and financial aid and other factors on the educational, work, and career choices of young adults.

(4) The routine uses of these data will be statistical in nature as detailed in paragraph 9 of Appendix B of the Department Regulations (34 CFR 5b) published in the Federal Register, Vol. 45, No. 92, May 9, 1980.

WORK EXPERIENCE

In this section, we would like to find out about the jobs you have held, particularly in the period between March 1982 and February 1984. Include full-time jobs, part-time jobs, apprenticeships, on-the-job training, military service and so on.

We are interested in learning about the kinds of jobs you have held, the hours you worked and your income from these jobs, the level of your job satisfaction, and the relation of your training and education to your work experience. This information will help us better understand the movement of young people into the world of work and the reasons for changes in job situations.

---

46. Between March 1982 and the end of February 1984, did you hold a full-time or part-time job of any kind? This includes PAID jobs, VOLUNTEER jobs, working WITHOUT PAY on a family farm or business or being in the MILITARY. (MARK ONE)

○

○ Yes (CONTINUE TO INSTRUCTIONS ON BOTTOM OF THIS PAGE)

○ No (SKIP TO Q.54)

Next we would like information about all of the jobs you had between March 1982 and the end of February 1984. We would also like to know about periods of time you were between jobs and looking for work.

IMPORTANT INSTRUCTIONS

There is room to discuss four jobs. At Q.47 enter the job you held on March 1, 1982. If you had no job at that time, enter the first job you held after March 1, 1982. Answer parts A-L about that job. Enter your next job at Q.48 and so on.

IF YOU HAVE HAD MORE THAN 4 JOBS: Enter the first three jobs in Qs.47 to 49 and then enter your *most recent* or *current* job in Q.50.

IF YOU HELD TWO JOBS AT THE SAME TIME: Enter both jobs but enter them on separate pages.

IF YOU HAVE BEEN IN THE MILITARY: Please consider your entire military experience as one job.

[2] This code is used to identify not reported occupations in surveys where the not reported cases are not allocated.

[3] Those returns from the Population Census which do not have an occupation entry are allocated among the major occupation groups during computer processing. These cases are labeled with the code for the "allocation" category to which they are assigned. (See text, page VI).

INDUSTRIAL CLASSIFICATION SYSTEM

Equivalent alphabetic codes follow some codes. Either code may be utilized, depending upon the processing method. Numbers in parentheses following the industry categories are the SIC definitions. "N.e.c." means "not elsewhere classified."

AGRICULTURE, FORESTRY, AND FISHERIES

Industry Code	
017 (A)	Agricultural production (01)
018	Agricultural services, except horticultural (07 except 0713 and 073)
019	Horticultural services (073)
027	Forestry (08)
028	Fisheries (09)

MINING

Industry Code	
047	Metal mining (10)
048	Coal mining (11, 12)
049	Crude petroleum and natural gas extractions (13)
057	Nonmetallic mining and quarrying, except fuel (14)

CONSTRUCTION

Industry Code	
067	General building contractors (15)
068	General contractors, except building (16)
069 (B)	Special trade contractors (17)
077	Not specified construction

Crosswalk Between The Handbook VI Vocational Program Listing and The New Classification

This appendix is designed to enable users to locate programs by crosswalking from previously used Handbook VI code listings into the new classification code listings. This appendix will be most helpful to those who are required to supply data for various data collections activities.

APPENDIX F: OTHER DATA FILES AVAILABLE FROM NCES

Other High School and Beyond Data Files Available from NCES

BASE YEAR FILES

Language File

The Language File contains information on each student who reported some non-English language experience either during childhood or at the time of the survey. This file contains 11,303 records (sophomores and seniors combined), with 42 variables for each student.

Parent File

The Parent File contains questionnaire responses from the parents of about 3,600 sophomores and 3,600 seniors who are on the Student File. Each record on the Parent File contains a total of 307 variables. Data on this file include parents' aspirations and plans for their childrens postsecondary education.

Twin and Sibling File

The Twin and Sibling File contains base year responses from sampled twins and triplets; augmented data on twins and triplets of sample members; and data from siblings in the sample. This file (2,718 records) includes all of the variables that are on the HS&B student file, plus two additional variables (family ID and SETTYPE--type of twin or sibling).

Teachers' Comments File

The Sophomore Teacher File contains responses from 14,103 teachers on 18,291 students from 616 schools. The Senior Teacher File contains responses from 13,683 teachers on 17,056 students from 611 schools. At each grade level, teachers had the opportunity to answer questions about HS&B-sampled students who had been in their classes. The typical student in the sample was rated by an average of four different teachers. Preliminary analyses by NCES indicate that the files contain approximately 76,000 teacher observations of sophomores and about 67,000 teacher observations of seniors.

Friends' File

The Friends' File contains identification numbers of students in the HS&B sample who were named as friends of other HS&B-sampled students. Each record contains the ID of sampled students and IDs of up to three friends. Linkages among friends can be used to investigate the sociometry of friendship structures, including reciprocity of choices among students in the sample, and for tracing friendship networks.

MERGED BASE YEAR AND FIRST FOLLOW-UP FILES

Sophomore File

The First Follow-Up Sophomore File contains responses from 29,737 students and includes both base year and first follow-up data. This file includes information on school, family, work experiences, educational and occupational aspirations; personal values, and test scores of sample participants. Students are also classified as to high school status as of 1982 (i.e., dropouts, same school, transfer, or early graduate).

Senior File

The First Follow-Up Senior File contains responses from 11,995 individuals and includes both base year and first follow-up data. This file includes information from respondents concerning their high school and postsecondary experiences and their work experiences.

OTHER FILES

Transcript File

This file describes the coursetaking behavior of 15,941 sophomores of 1980 throughout their four years of high school. Data include a six-digit course number* for each course taken, along with course credit, course grade, and year taken. Other items of information, such as grade point average, days absent, and standardized test scores, are also contained on the file.

Offerings and Enrollments File

This file contains school information, and course offerings and enrollments data, for 957 schools. Each course offered by a school is identifed by a six-digit course number.* Other information, such as credit offered by the school, is also contained on each record.

Updated School File

This file contains base year data (966 completed questionnaires) and first follow-up data (956 completed questionnaires) from the 1,015 participating schools in the HS&B sample. First follow-up data were requested only from those schools that were still in existence in spring 1982 and had members of the 1980 sophomore cohort currently enrolled. Each high school is represented by a single record that includes 230 data elements from the base year school questionnaire, if available, along with other information from sampling files (e.g., stratum codes, case weights).

*Corresponds with descriptions in A Classification of Secondary School Courses (CSSC), developed by Evaluation Technologies, Inc., under contract with NCES, July 1982.

APPENDIX G: CLASSIFICATION VARIABLES

APPENDIX G
HIGH SCHOOL AND BEYOND COMPOSITE VARIABLES, FLAGS AND WEIGHTS

SENIOR COHORT, BASE YEAR THROUGH SECOND FOLLOW-UP SURVEYS

Each composite variable, flag, and weight is defined below. Numbers in parentheses refer to tape position. See Chapter 3 for a detailed discussion of weights and Chapter 7 for a brief discussion of flags and composite variables.

> PLEASE NOTE SIX VARIABLES IN THE FIRST PART OF THE FILE ARE REPEATED IN THE END OF THE FILE UNDER DIFFERENT LABELS. THIS WAS DONE FOR VARIABLES THAT WERE THE SAME BETWEEN THE FIRST AND SECOND FOLLOW-UPS. SCHURB (24) = HSURBAN (3652); SEX (30) = SEXCOMP (3672); BYTEST (32-36) = TEST (3636); BYTESTQ (37) = TESTQ (3641); BYSES (38) = SES (3657); BYSESQ (43) = SESQ (3662). THESE VARIABLES HAVE BEEN INCLUDED IN BOTH PLACES FOR THE CONVENIENCE OF THE USER.
>
> ALSO NOTE THAT RACE (31) IS NOT THE SAME AS RACE2 (3628).

SEX (30): At the time this variable was constructed, students' sex was available in three survey documents: the base year questionnaire, the base year student Identification Pages, and the first follow-up questionnaire. If one or more of these sources contained a valid sex code (and if the non-missing sources did not conflict), that code was taken for the composite sex variable (SEX).

In 857 cases either no valid sex code or contradictory sex codes were found. When the information was missing, the value of the composite sex variable was assigned by inspection of the students' first names. In the small number of cases with inconsistent codes, a thorough review of the documentation for the case was carried out until the conflict was resolved.

Second follow-up survey data (questionnaire and locator pages) confirmed that SEX was a highly accurate composite. For the convenience of the user, a copy of SEX (named SEXCOMP) has been placed among the second follow-up composite variables, in position 3627. (See below.)

RACE (31): This variable was based on race and ethnic origin codes which were available from both the base year and first follow-up questionnaires. (See base year questions 90 and 91 and first follow-up questions 52 and 53.) Composite race/ethnicity codes (RACE) were assigned according to a hierarchical sequence as follows: (1) if a Hispanic ethnic origin (codes 01-04) was indicated either year, the student was coded as Hispanic; otherwise (2) if an American Indian race code, code 3, was present either year, the student was coded as American Indian; otherwise (3) if an Asian race code, code 1, was present either year, the student was coded as Asian; otherwise (4) if a race code of "Black," code 1, was present either year, the student was coded as Black; otherwise (5) if a race code of "White," code 2, was present either year, the student was coded as White.

All remaining students (685 in both cohorts combined) were assigned to the residual category, "Other." This category therefore includes students whose race was coded as "Other" or was missing in both questionnaires and who did not give a Hispanic ethnic origin either year.

BYTEST (32-36): For the Base Year Test Score Composite, two vocabulary tests were combined into a single vocabulary score, weighting by the number of items in each. EBVOC1SD had 15 items, and EBVOC2SD had 12, so the combined vocabulary score was (15 x EBVOC1SD + 12 x EBVOC2SD)/27. This procedure had the effect of scoring the two tests as one long test. If only one vocabulary score was non-missing, it was taken for the combined vocabulary score. With this done, the composite test score was computed as an average of the non-missing scores among EBREADSD, EBMTH1SD, and the combined vocabulary score.

BYTESTQ (37) indicates whether the student's BYTEST score falls in the lowest, second, third, or highest quartile of the distribution for the population (weighted by BYTESTWT, which was on the base year data file). Quartile cutpoints were 43.28, 49.86, and 56.44.

BYSES (38-42): The Base Year Socioeconomic Status composite was copied from the base year public use file. It was not possible to construct a First Follow-Up SES score for the senior cohort because too few of the base year components were repeated in the first follow-up senior questionnaire.

The procedures used to construct BYSES adhered as closely as possible those used in NLS-72, in order to retain comparability. The composite is based on five components: (1) father's occupation, (2) father's education, (3) mother's education, (4) family income, and (5) material possessions in the household, and is the simple average of the non-missing components after each component score has been standardized.

BYSESQ (43) was calculated to indicate in which quartile of the population a student's composite SES score falls. For the first follow-up data set, new quartiles were computed for the BYSES scores using a revised procedure. The new procedure calculated quartile cutting points for the weighted population of SES scores (using BYWT) rather than establishing quartile cutting points on the assumption of a normal distribution of scores, as was done in the base year. Cutting points are -.54, -.07, +.50.

FECONCPT, FELOCUS, FEWORK, FEFAMILY, FECOMMUN (44-47, 48-51, 52-55, 56-59, and 60-63, respectively): The same five psychological scales were provided in the first follow-up as in the base year. For seniors, these scales, and their components, are:

Self-concept: FE75A, C, D, H

Locus-of-control: FE75B, E, F, G

Work orientation: FE85A, C, E

Family orientation: FE85B, H, I
(Note that component 'I' is given negative weight.)

Community orientation: FE85F, G, J

For all of these composites, each component is standardized separately (using the appropriate weight), and the non-missing components are averaged. Students missing all the components of any scale are assigned the missing value (8) for that scale.

METHOD (3576): This variable indicates whether a respondent completed the second follow-up questionnaire without assistance (1), was interviewed by telephone (2), or was interviewed in person (3). Nonrespondents received a code of 8.

FU2PART (3577): This is the second follow-up participation flag. 0=Nonparticipant; 1=Participant.

FU2STAT (3578): This variable provides the final disposition of the case during the second follow-up. 1=Participant, 2=Unavailable, 3=Unlocatable, 4=Refused/Brokeoff, 5=Deceased, and 6=Mentally Handicapped.

BYWT (3579): Base Year Weight is the follow-up raw weight adjusted for nonresponse during the base year. This weight should be used with base year questionnaire data (i.e., select only cases with BYPART=1; this is equivalent to selecting if BYWT NE 0).

FU1WT (3587): Weight applied to first follow-up questionnaire data (select cases with FU1PART=1; this is equivalent to selecting if FU1WT NE 0).

FU2WT (3595): Weight applied to second follow-up questionnaire data (select cases with FU2PART=1; this is equivalent to selecting if FU2WT NE 0).

PANELWT3 (3603): Weight applied to cases with data from the base year, first follow-up, and second follow-up. This weight is appropriate for analyses that use items from all three waves (select cases for which BYPART=1 and FU1PART=1 and FU2PART=1; this is equivalent to selecting if PANELWT3 NE 0).

TESTWT2 (3611): Weight applied to cases with second follow-up data and enough base year test data to allow the construction of the test composite BYTEST (select cases for which TESTWT2 NE 0). Since there were several tests administered, and since some respondents did not take all of the tests, we have chosen a conservative definition of a test "participant." Even if a respondent has some test data, he/she is only considered a test participant if there was enough test data for constructing a meaniningful composite score. Those who have insufficient test data or no test data were given a value of zero for TESTWT2.

RAWWT (3619): Weight applied to cases that were selected into the follow-up subsample. This weight is unadjusted for nonresponse.

SEXCOMP (3627): This variable is identical to SEX (see above). In most cases it reflects the valid sex code indicated by the respondent on the base year questionnaire, base year Identification Page, and/or the first follow-up questionnaire. For 857 cases, where there was missing or conflicting data, a review of names and other information was made to determine sex. 1=Male, 2=Female.

RACE2 (3628): This race/ethnicity composite is the same as RACE (position 31) except it provides further subdivision of participants who declared they were Hispanic. This variable was constructed from the first follow-up variables RACE (composite race), FE18 (race), and FE19 (origin or descent); and the base year variables BB089 (race) and BB090 (origin or descent). Respondents were classified according to a preference hierarchy, from the code 1.1 to the code of 6. This means that the algorithm that created this composite first checked to see if the conditions were met for code 1.1; if these conditions were not met, then the algorithm tested for the conditions for code 1.2, and so on. Respondents were classified as follows:

Mexican (1.1): RACE=1 and, for FE19 and BB090, either a) both are equal to 1, or b) one is missing and the other =1.

Cuban (1.2): RACE=1 and, for FE19 and BB090, either a) both are equal to 2, or b) one is missing and the other =2.

Puerto Rican (1.3): RACE=1 and, for FE19 and BB090, either a) both are equal to 3, or b) one is missing and the other =3.

Other Hispanic (1.4): RACE=1 and, for FE19 and BB090, either a) one is missing and the other=4, or b) both are in the range of 1-4 (Hispanic), or c) one is in the range of 1-4 (Hispanic) and the other is in the range of 5-31 (non-Hispanic) and no other race information is available from FE18 and BB089. If the first follow-up race variable (FE18) and the base year race variable (BB089) disagree, and one indicates non-Hispanic, then the respondent is classified as non-Hispanic (RACE 2-5, 1.4, or 6) according to the preference hierarchy: Native American, Asian, Black, White, Other Hispanic, Other. This means that if Native American was ever mentioned, the respondent is assigned to that category. If there is no mention of Native American but Asian is mentioned, the Asian category is chosen, and so on down the hierarchy.

Native American (2): RACE=2; or if RACE=1 and FE19 or BB090 is in the range of 5-31, Native American is assigned using the reclassification hierarchy described above.

Asian/Pacific (3): RACE=3; or if RACE=1 and FE19 or BB090 is in the range 5-31, Asian/Pacific is assigned using the reclassification hierarchy.

Black (4): RACE=4; or if RACE=1 and FE19 or BB090 is in the range 5-31, Black is assigned according to the reclassification hierarchy.

White (5): RACE=5; or if RACE=1 and FE19 or BB090 is in the range 5-31, White is assigned according to the reclassification hierarchy.

Other (6): RACE=6; or if RACE=1 and FE19 or BB090 is in the range 5-31, Other is assigned according to the reclassification hierarchy.

BIRTHMO (3630): Composite month of birth reflects agreements found amoung five independent sources of birthdate.

BIRTHDAY (3632): Composite day of birth reflects agreements found among five independent sources of birthdate.

BIRTHYR (3634): Composite year of birth reflects agreements found among five independent sources of birthdate.

TEST (3636): This variable was copied from the first follow-up file (BYTEST). It is an average of the non-missing scores among EBREADSD, EBMTH1SD, and the combined score from the two vocabulary tests. The combined score was computed as (15 X EBVOC1SD + 12 X EBVOC2SD)/27. (This test composite is provided in two places for the user's convenience.)

TESTQ (3641): This variable also is identical to (BYTESTQ) and indicates the quartile within which the respondent scored. (The test quartile is provided in two places for the user's convenience.) Cutting points are 43.28, 49.86, 56.44.

HSGRADES (3642): Taken from the base year item BB007, HSGRADES indicates how the respondent described his grades during high school. 1=Mostly A's or 90-100, 2=Half A's and B's or 85-89, 3=Mostly B's or 80-84, 4=Half B's and C's or 75-79, 5=Mostly C's or 70-74, 6=Half C's and D's or 65-69, 7=Mostly D's or 60-64, 8=Below D or Less than 60.

HSPROG (3644): This variable collapses seven vocational categories in the base year variable H.S. PROGRAM TYPE (BB002) into one large vocational category. 1=General, 2=Academic, 3=Vocational.

HSHOMEWK (3645): This variable is a recode of base year variable BB015, the average number of hours spent on homework per week. Hours are grouped into three rather than seven categories. 1=Less Than One Hour, 2=1-5 Hours, 3=5+ Hours.

F1STUTYP (3646): Indicates student type at the time of the first follow-up. All seniors are coded as '6'. Sophomores have additional codes referring to whether they had dropped out, transfered, etc. (See the Sophomore User's Manual for details.)

HSDIPLOM (3647): High School Diploma/GED was constructed from FE6 and SE13, identical items in the first follow-up and second follow-up, respectively, that asked respondents whether they had graduated from high school. HSDIPLOM was constructed per the following hierarchy:

Have Diploma or GED--Never Left High School (1): a) FE6=1 (Yes, completed high school as of first follow-up) OR b) FE6=2 (No, but working toward GED or diploma) and SE13=1 Yes, completed high school as of first follow-up) OR c) FE6=missing and SE13=1 (yes, completed high school as of first follow-up)

Have Diploma or GED--Returned For It (2): a) FE6=4 (No, but since earned diploma/GED) OR b) SE13=1 (Yes, completed high school as of second follow-up) OR c) SE13=4 (No, but since earned diploma/GED)

No Diploma--But Returned For It (3): a) FE6=2 (No, but working toward GED/Diploma as of first follow-up) OR (b) SE13=2 (No, but working toward GED/diploma as of second follow-up)

No Diploma--No Return (4): FE6=3 or SE13=3 (No, left without graduating)

No Data Available (8): FE6 and SE13 missing

PSEPLANS (3648): Base year variable BB065, the amount of schooling the respondent expected to receive, was recoded from nine categories to five. (1)=none; (2)=vocational-technical; (3)=less than four year degree; (4)=college degree; (5)=advanced degree.

HSTYPE (3649): This variable is a recode of SCHSAMP, the respondent's original high school sample type. Regular sample, alternative public, Cuban Hispanic public, and other Hispanic public were collapsed into public (1). Regular Catholic, Black Catholic, and Cuban Hispanic Catholic were combined into Catholic (2). Elite private and other private were classified as private (3).

HSREGION (3650): To facilitate recoding of census regions, SCHREGN was recoded using decimals. (1.1) = New England--Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut; (1.2) = Middle Atlantic--New York, New Jersey, Pennsylvania; (2.1) = East North Central--Ohio, Indiana, Illinois, Michigan, Wisconsin; (2.2) = West North Central--Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas; (3.1) = South Atlantic--Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida; (3.2) = East South Central--Kentucky, Tennessee, Alabama, Mississippi; (3.3) = West South Central--Arkansas, Louisiana, Oklahoma, Texas; (4.1) = Mountain--Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah; (4.2) = Pacific--Washington, Oregon, California, Alaska, Hawaii. The use of decimals permits the user to employ the simple SAS "fuzz" statement to recode nine regions to four.

HSURBAN (3652): This variable is the same as SCHURB (24) and classifies the respondent's high school according to the CIC urbanization code. (1)=urban; (2)=suburban; (3)=rural.

COMTYPE (3653): This variable, the community type composite, is based on SCHURB (the degree of urbanicity of the community in which the base year original school was located), FE4 (the type of community in which the respondent lived as of February 1982), and SE6 (the type of community lived in as of February 1984). COMTYPE takes on the value of SE6, or of FE4 if SE6 is missing, or is coded from SCHURB if SE6 and FE4 are both missing.

HANDICAP (3654): This composite indicates whether the respondent ever indicated having a handicap, participation in a program for the handicapped, or receipt of Division of Vocational Rehabilitation benefits. Respondents were classified according to the following hierarchy: Handicapped Program, Consistent Handicap, Inconsistent Handicap, and No Handicap.

Handicapped Program (1): BB011H=2 (have participated in a program for the educationally handicapped) AND/OR BB011I=2 (have participated in a program for the physically handicapped) AND/OR FE45AK1=1 AND/OR FE45AK2=1 AND/OR SE27AK1=1 AND/OR SE27AK2=1 (have received Division of Vocational Rehabilitation Benefits).

Consistent Handicap (2): Respondent did not report participation in a handicapped program, but reported a handicap in BOTH the base year and the first follow-up (the respondent need not report the same kind of handicap in both waves). Report variables were BB087A, BB087C-BB087G, BB088, FE84, and FE83A-FE83G.

Inconsistent Handicap (3): Respondent did not report participation in a handicapped program, and gave inconsistent reports of having a handicap. He/she indicated a handicap in one wave but not the other, or a handicap in one wave and no response in the other. Report variables were as for (2) above.

Not Handicapped (4): Respondent never reported having a handicap or participating in a program for the handicapped. (This does not include respondents who gave no answer to any of the questions regarding specific handicaps or limiting physical conditions.)

Missing (8): Respondent did not answer any of the following questions: BB087A, BB087C through BB087G, BB088, FE83A through FE83G, and FE84.

CHILDFLG (3655): Dichotomous variable which indicates whether the respondent has ever reported having children, based on the variables BB036I, BB081B, FE3I, FE15B, FE62, SE4I, SE66, SE66A. If the respondent gave no answer to any question about children, this variable was given a value of 8 ("missing"). Otherwise, if the respondent ever answered 'yes' to at least one of the variables, CHILDFLG is given the value of 1 ("have children"). If the respondent never answered 'yes', CHILDFLG is coded 0 ("no children").

HOMELANG (3656): Describes the home language background, based on variables LB14 (language usually spoken in the home) and LB15 (other language spoken in the home) from the base year Language File. The Language File contains only those respondents who mentioned a non-English language in questions 11 through 15 of the base year Student Identification Pages. LANGDATA in tape position 212 indicates whether or not a respondent has language data available, and is correct for second follow-up seniors. Respondents were classified as follows:

Monolingual, Non-English (1): LB14 is in the range 2-11 (a single non-English language is usually spoken in the home) and LB15=1 ("no other language" is spoken).

Multilingual, Non-English Dominant (2): LB14 is in the range 2-11 and LB15 is in the range 2-96 (another language or combination of languages is also spoken or there was a multiple punch).

Multilingual, Unknown Dominant (3): LB14 is in the range 12-96 ("language usually spoken" is reported as being a combination of languages), OR LB14 is missing and LB15 is in the range 20-96 (more than one other language spoken).

Multilingual, English Dominant (4): LB14=1 (English is usually spoken) and LB15 is in the range 3-96 (one or more non-English languages are also spoken).

Monolingual, English (5): LB14=1 and LB15=1 or 2 ("no other language" or "English", respectively).

Assumed Monolingual, English (6): BYPART=1 and LANGDATA NE 1 (i.e., the respondent participated in the base year but is not in the Language File) OR LB14=1 and LB15 is missing.

Missing (8): BYPART=0 OR the respondent is in the Language File but both LB14 and LB15 are missing, OR the respondent is in the Language File and LB14 is in the range 2-11 (respondent reports that a single non-English language is usually spoken) but LB15 is missing, OR the respondent is in the Language File and LB15 is in the range 1-12 but LB14 is missing. The missing category is predominantly base year nonparticipants (495 of the 522 people).

SES (3657-3661): Identical to BYSES (the base year socioeconomic status composite).

SESQ (3662): Identical to BYSESQ (the quartile coding of SES). Cutting points are -.54, -.07, +.50.

PAREDUC (3663-3664): Parent's highest educational level reported in the base year and first follow-up takes the highest value among the variables BB039 (father's educational level - base year), BB042 (mother's educational level - base year), FE20 (father's educational level - first follow-up), and FE21 (mother's educational level - first follow-up). 1=Don't Know, 2=Less than High School, 3=High School Graduate, 4=Less than 2 Years Vocational/Etc., 5=2 or More Years Vocational/Etc., 6=Less than 2 Years College, 7=2 or More Years College, 8=College Degree (4 or 5 Years), 9=Master's Degree, 10=PhD/MD/Advanced Degree, 98=Missing. (A 98 is assigned only when all variables are missing.)

FAMSIZE (3665-3666): Family Size is based on check lists provided in the base year questionnaire of people living with the respondent and on the number of siblings reported by the respondent, BB036A-BB036K and BB096A-BB096E. As a conservative measure, each category was counted as 1 person even though some categories may represent several people (e.g., if the respondent reported living with "other relatives", this response was counted as 1 person).

FAMSIZE is the total of all categories living with the respondent, plus one for the respondent, plus the number of siblings if the respondent indicated that he lived with relatives (not including guardians or spouse).

For example, if the respondent lived with a spouse, the 'number of siblings' would not be added to FAMSIZE unless the respondent indicated that relatives (e.g., father, siblings, etc.) also lived with him. However, if a respondent lived with grandparents, a parent, "my children", siblings, or "other relatives", then the number of siblings would be added to the total, whether or not 'I live with siblings' had been checked.

If 'I live with siblings' is checked, FAMSIZE is increased by at least one, even if the 'number of siblings' indicates 'none' or missing. Conversely, if any relatives live with the respondent, then the number of siblings (if any) is added to FAMSIZE whether or not 'I live with siblings' is answered 'Yes.' FAMSIZE=1 ('lives alone') when BB036A=1 OR when the only answer to any checklist question was 'No.' FAMSIZE=98 ('missing') only when all of the checklist variables are missing.

FAMINC (3667-3668): Family income reported in the base year Parent Questionnaire. If not available, income is taken from the base year student questionnaire (BB101).

FLAGINC (3669): Indicates how discrepant reported family income is from estimated family income. FLAGINC=1 when the composite income interval does not overlap with a one-standard deviation interval about estimated income. Estimated income was determined by regressing the log of parent reported income ,Y, on student reported income, X, expressed in dummy form. When FLAGINC=1, it is assumed that composite income is somewhat unreliable because it does not overlap with the estimated income interval. When FLAGINC=0, there is overlap between estimated and composite income, and composite income is considered more reliable.

HOMEOWN (3670): Indicates, based on the Parent Questionnaire completed during the base year, whether the student's family rented or owned their home. If not available from the Parent file, student item BB102 was used. 0=Renter; 1=Homeowner.

CUNEMR80, CUNEMR81, CUNEMR82 (3671-3673, 3674-3676, and 3677-3679, respectively): These variables are the county unemployment rates for 1980, 1981, and 1982, for the county where the sample member's high school was located. Unemployment rates were obtained from a supplementary file, Local Economic Indicators for HS&B Schools, and were added to the second follow-up tapes. The Local Economic Indicators file was created from data obtained from the Bureau of Economic Analysis, the Bureau of Labor Statistics, and the Census, and is available from NCES.

CPCPI80, CPCPI81 (3680-3684 and 3685-3689, respectively): These variables are the County Per Capita Personal Income in 1980 and 1981 for the county in which the sample member's high school was located. Data were obtained from a supplementary file, Local Economic Indicators for HS&B Schools, and were added to the second follow-up tapes. The Local Economic

Indicators File was created from data obtained from the Bureau of Economic Analysis, the Bureau of Labor Statistics, and the Census, and is available from NCES.

MFLAGW (3690): Indicates whether the source of wage data in MWAGE80--MWAGE82 was county, SMSA, or state level.

MWAGE80, MWAGE81, MWAGE82 (3691-3694, 3695-3698, and 3699-3702, respectively): Average hourly wage in manufacturing in 1980, 1981, and 1982, respectively of the county, state or SMSA in which the sample member's high school was located. Data were obtained from a supplementary file, Local Economic Indicators of HS&B Schools, and were added to the second follow-up tapes. The Local Economic Indicators File was created from Analysis, the Bureau of Labor Statistics, and the Census, and is available from NCES.

PSESOC80, PSESFE81, PSESOC81, PSESFE82, PSESOC82, PSESFE83, PSESOC83, PSESFE84 (3703-3704, 3705-3706, 3707-3708, 3709-3710, 3711-3712, 3713-3714, 3715-3716, and 3718-1719, respectively): Activity state pointers for PSE Status in October 1980, February 1981, October 1981, ... and February 1984, respectively.

The first follow-up variables that were used for the construction of PSESOC80, PSESFE81, PSESOC81, and PSESFE82 are:

FE33B1 (student reported school type)
FE33C1M (month respondent STARTED 1st school after high school)
FE33C1Y (year respondent STARTED 1st school after high school)
FE33D1M (month respondent LEFT 1st school after high school)
FE33D1Y (year respondent LEFT 1st school after high school)
FE33D1SJ (was respondent STILL IN 1st school)
FE33E1 (was respondent full time or part time)
FE33G1 (student reported school control)

FE33B2 (student reported school type)
FE33C2M (month respondent STARTED 2nd school after high school)
FE33C2Y (year respondent STARTED 2nd school after high school)
FE33D2M (month respondent LEFT 2nd school after high school)
FE33D2Y (year respondent LEFT 2nd school after high school)
FE33D2SJ (was respondent STILL IN 2nd school)
FE33G2 (student reported school control)
.
.
.

FE33B5 (student reported school type)
FE33C5M (month respondent STARTED 5th school after h.s. -- or most recent school)

FE33C5Y (year respondent STARTED 5th school after h.s. --
or most recent school)
FE33D5M (month respondent LEFT 5th school after h.s. --
or most recent school)
FE33D5Y (year respondent LEFT 5th school after h.s. --
or most recent school)
FE33E6SJ (was respondent STILL IN 5th school
or most recent school)
FE33E5 (was respondent full time or part time)
FE33G15(student reported school control)

Second follow-up variables were used for the construction of PSESOC82, PSESFE83, PSESOC83, and PSESFE84 in a similar way. The second follow-up variables used were: SE18A, SE18B, SE18CM, SE18CY, SE18DM, SE18DY, SE18F; SE19A, SE19B, SE19CM, SE19CY, SE19DM, SE19DY, SE19F; SE20A, SE20B, SE20CM, SE20CY, SE20DM, SE20DY, SE20F;

School type and school control were also obtained from the HEGIS directories of the years in which the student reported attending the school. Directory information was used first. If directory information was missing, student reported information was used.

The first step in generating the PSE Status activity state pointers was to check for conflicting start and leave dates. For a particular school, if the start date was found to be later than the leave date, both of these endpoint dates were set to missing.

Also, for a handful of cases, a particular endpoint (i.e., a start date or leave date for a particular school) was found to have a year specified but the month was missing. For these few cases, the month was assumed to be September, since this would place the endpoint in between the two pointers (February and October) for that particular year.

Next, all PSE activity state pointers were initialized at a value of 99, non-student status.

Tests were then performed for each pointer date to determine if the date fell between the start and leave dates for a school or if the date fell after the start date when "STILL ATTENDING THIS SCHOOL" is marked. If the student attended a private four-year school at the pointer date, the pointer was set to 1; if a public four-year school, it was set to 2; if a public two-year school, 3; if a private two-year or other school, 4. If the student indicated that he was going full time, the pointer was incremented by 4.

When either a start or leave date was missing in such a way as to make the respondent's PSE status uncertain at the time of the activity state pointer, then the pointer was given a value of 98 (missing).

A special missing data problem is presented by the fact that the "5th" school in the first follow-up survey and the "3rd" school in the second follow-up survey are actually the most recent or current schools if the respondent held more than 5 or 3 schools, respectively. For this reason, if an activity state pointer date fell between the leave date for school 4 and the start date for school 5 for the first follow-up data, or between the leave date for school 2 and the start date for school 3 in the second follow-up data, there is no way to know whether the respondent was in school at that time, since the gap in time between the two schools may either be due to a period of not attending a school or it may simply be due to a lack of space in the questionnaire. For these cases, the activity state pointer was assigned a value of 93 (insufficient data).

JOBSOC80, JOBSFE81, JOBSOC81, JOBSFE82, JOBSOC82, JOBSFE83, JOBSOC83, JOBSFE84 (3719-3720, 3721-3722, 3723-3724, 3725-3726, 3727-3728, 3729-3730, 3731-3732, and 3733-3734, respectively): Activity state pointers for Employment Status in October 1980, February 1981, October 1981, ... and February 1984, respectively.

The first follow-up variables that were used for the construction of JOBSOC80, JOBSFE81, JOBSOC81, and JOBSFE82 are:

FE23OC80 (Was respondent working/in military in Oct. 1980?)
FE23FE81 (Was respondent working/in military in Feb. 1981?)
FE23OC81 (Was respondent working/in military in Oct. 1981?)
FE23FE82 (Was respondent working/in military in Feb. 1982?)

FE24A5M (month respondent STARTED 1st job after high school)
FE24A5Y (year respondent STARTED 1st job after high school)
FE24A6M (month respondent LEFT 1st job after high school)
FE24A6Y (year respondent LEFT 1st job after high school)
FE24A6SJ (does respondent STILL HAVE 1st job)
FE24A9 (NUMBER OF HOURS worked in 1st job after high school)

FE24B5M (month respondent STARTED 2nd job after high school)
FE24B5Y (year respondent STARTED 2nd job after high school)
FE24B6M (month respondent LEFT 2nd job after high school)
FE24B6Y (year respondent LEFT 2nd job after high school)
FE24B6SJ (does respondent STILL HAVE 2nd job)
FE24B9 (NUMBER OF HOURS worked in 2nd job after high school)

FE24E5M (month respondent STARTED 5th job after h.s. -- or most recent job, if more than 5 jobs held since h.s.)
FE24E5Y (year respondent STARTED 5th job after h.s. -- or most recent job, if more than 5 jobs held since h.s.)
FE24E6M (month respondent LEFT 5th job after h.s. -- or most recent job, if more than 5 jobs held since h.s.)
FE24E6Y (year respondent LEFT 5th job after h.s. -- or most recent job, if more than 5 jobs held since h.s.)
FE24E6SJ (does respondent STILL HAVE 5th job or most recent job, if more than 5 jobs held since h.s.)
FE24E9 (NUMBER OF HOURS worked in 5th job after h.s. -- or most recent job, if more than 5 jobs held since h.s.)

FE23OC80 (Was respondent unemployed in Oct. 1980?)
FE23FE81 (Was respondent unemployed in Feb. 1981?)

FE23OC81 (Was respondent unemployed in Oct. 1981?)
FE23FE82 (Was respondent unemployed in Feb. 1982?)

Second follow-up variables were used for the construction of JOBSOC82, JOBSFE83, JOBSOC83, and JOBSFE84 in a similar way. However, there were two major differences in the second follow-up employment data: 1) there was no question comparable to first follow-up question number 23 (which asked the respondent if he/she was working or in the military at specific points in time), and 2) there were only questions for a maximum of four jobs.

The second follow-up variables used were SE47EM, SE47EY, SE47F, SE47FM, SE47FY, SE47I; SE48EM, SE48EY, SE48F, SE48FM, SE48FY, SE48I; SE49EM, SE49EY, SE49F, SE49FM, SE49FY, SE49I; SE50EM, SE50EY, SE50F, SE50FM, SE50FY, SE50I; SE56A82E, SE56A83B, SE56A83J, SE56A84B.

The first step in generating the Employment Status activity state pointers was to check for conflicting start and leave dates. For a particular job, if the start date was found to be later than the leave date, both of these endpoint dates were set to missing.

Also, for a handful of cases, a particular endpoint (i.e., a start date or leave date for a particular job) was found to have a year specified but the month was missing. For these few cases, the month was assumed to be September, since this would place the endpoint in between the two pointers (February and October) for that particular year.

Next, a pointer was initially set to 3 (unemployed) if the respondent reported being without a job AND looking for work AND not a full-time student during the time interval represented by the pointer. Similarly, if the respondent reported that he/she was without a job AND NOT looking for work, or if the respondent reported being a full-time student in some time interval, then all pointers found in that time interval were initially set to 4 (not in the labor force). Later, these initial values were overridden if the start and leave dates for one of the jobs reported by the respondent was found to include the point in time that the activity state pointer represents.

Tests were then performed for each pointer date to determine the date fell between the start and leave dates for a job or if the date fell after the start date when "STILL HAVE THIS JOB" is marked. If the respondent held at least one full-time (35 hours per week or more) job on the pointer date, the pointer was set to 1 employed full-time); if the respondent held a job or jobs on the pointer date, but did not work at least 35 hours per week at any single job, then the pointer was set to 2 (employed part-time), even if the total hours per week for all jobs together amounted to 35 hours or more. (The rationale for this decision is that a single full-time job is qualitatively different from a combination of part-time jobs, since the former is more likely to provide employee benefits and is often more permanent than a combination of part-time jobs.)

When either a start or leave date is missing in such a way as to make the respondent's employment status uncertain at the time of the activity state pointer, then the pointer was given a value of 98 (missing).

A special missing data problem is presented by the fact that the "5th" job in the first follow-up survey and the "4th" job in the second follow-up survey were the most recent or current jobs if the respondent held more than 4 or 5 jobs, respectively. For this reason, if an activity state pointer date fell between the leave date for job 4 and the start date for job 5 for the first follow-up data, or between the leave date for job 3 and the start date for job 4 in the second follow-up data, there is no way to know whether the respondent was employed at that time, since the gap in time between the two jobs may be due either to a period of non-employment or lack of space in the questionnaire. For these cases, the activity state pointer was assigned a value of 93 (insufficient data).

TUITION1, TUITION2, TUITION3 (3735-3739, 3740-3744, 3745-3749, respectively): Tuition at First, Second, and Third Post-Secondary Institutions, respectively. Tuition for each school reported by the respondent was obtained from the appropriate HEGIS directory of FICE codes. Depending on the dates of attendance, the 1980-81, 1981-82, and 1983-84 directories were used. For institutions with in-state and out-of-state tuitions, the choice was made according to the following rules. In-state was assigned (a) when the parents and student lived in the same state as the school; and (b) when the parents lived in a different state from the school, the student lived in the same state, and the student was independent (according to GSL criteria). Out-of-state tuition was assigned when (a) both parents and student lived in a different state from the school; (b) when the parents lived in a different state, the student lived in the same state, and the student was dependent on the parents (according to GSL criteria). first follow-up locating information was used to determine residency. If unavailable, base year data were used. If locating information was insufficient to determine residency, tuition was declared "missing". Tuitition is coded "legitimate skip" for respondents who attended a vocational school, which would not be listed in the HEGIS directory.

VOCNTRL1, VOCNTRL2, VOCNTRL3 (3750-3751, 3752-3753, 3754-3755, respectively): Type of control at first, second, and third postsecondary vocational institutions, indicated on the second follow-up survey. This information was obtained from codes contained in the NCES Directory of Post-Secondary Schools with Occupational Programs (1981-82). If the school was not listed in the directory, Vocational Control was imputed from questions 18, 19, and 20 A and B. For each of these variables, the values are (0) nonparticipant; (11) public 2-year; (12) public 4-year; (21) private 2-year; (22) private 4-year; (98) missing; (99) legitimate skip. Note that the user can obtain collapsed categories for public-private and two year-four year by selecting the appropriate column. Legitimate skip was coded for respondents who had tuition data and therefore attended an academic college or university. Missing was assigned if the school was not listed in the directory, and there was insufficient information in the questionnaire to determine Vocational Control.

APPENDIX H: GUIDELINES FOR USING SAS WITH HS&B DATA

APPENDIX H

GUIDELINES FOR USING SAS WITH HS&B DATA

THE FILES PROVIDED ON THE PUBLIC RELEASE TAPE INCLUDE SAS CONTROL CARDS, A SAS SYSTEM FILE, AND A DOCUMENTATION FILE (WHICH ACCOMPANIES THE SAS SYSTEM FILE).

THE SAS SYSTEM FILE INCLUDES:

1) FIRST FOLLOW-UP FLAGS AND COMPOSITES
2) BASE YEAR QUESTIONNAIRE DATA
3) BASE YEAR TEST DATA (SEE NOTE BELOW)
4) FIRST FOLLOW-UP QUESTIONNAIRE DATA
5) SELECTED BASE YEAR SCHOOL DATA
6) SECOND FOLLOW-UP QUESTIONNAIRE DATA
7) SECOND FOLLOW-UP FLAGS, WEIGHTS, AND COMPOSITES

NOTE: TEST COMPOSITES THAT WERE CONSTRUCTED AT THE TIME OF THE FIRST FOLLOW-UP ARE GROUPED WITH THE FIRST FOLLOW-UP FLAGS AND COMPOSITES. DUPLICATES OF THESE TEST COMPOSITES (WITH SLIGHTLY DIFFERENT SAS VARIABLE NAMES) HAVE BEEN GROUPED WITH THE SECOND FOLLOW-UP FLAGS, WEIGHTS, AND COMPOSITES.

THE SAS CONTROL CARDS PROVIDED ON THE FINAL DATA TAPES ARE THE SAME ONES THAT WERE USED TO CREATE THE SAS SYSTEM FILE ON THE FINAL DATA TAPES.

**** WARNING *********** PLEASE NOTE *********** WARNING ****

N.C.E.S. AND N.O.R.C. STRONGLY SUGGEST THAT ALL SAS USERS BE AWARE OF THE FOLLOWING POTENTIAL PROBLEM AREAS WHEN USING HS&B DATA FILES VIA SAS:

1) THERE ARE BLANKS IN THE RAW DATA FILE FOR A VARIETY OF REASONS, SUCH AS WHERE QUESTIONS WERE ASKED OF THE SOPHOMORES ONLY. SEE THE USER'S MANUAL FOR MORE INFORMATION ABOUT THIS. ALSO, SEE POINT NUMBER 7) OF THIS DOCUMENT FOR A WARNING ABOUT BLANKS DUE TO NONPARTICIPATION.

2) SAS USERS SHOULD USE THE '(KEEP=...)' AND '(DROP=...)' OPTIONS IN THE 'SET...;' STATEMENT AND/OR IN THE 'DATA...;' STATEMENT WHEN CREATING WORKING DATA FILES SO THAT UNWANTED VARIABLES ARE NOT INCLUDED IN THE FILES. IT IS FASTER (BUT NOT ESSENTIAL) FOR VARIABLES IN THE '(KEEP=...)' STATEMENT TO BE LISTED IN THE SAME ORDER AS THEY OCCUR IN THE MAIN SYSTEM FILE. REMEMBER ALSO THAT THE '(KEEP=...)' OPTION DOES NOT REORDER THE VARIABLES IN THE NEW DATASET. TO REORDER VARIABLES, USE THE 'RETAIN ...;' STATEMENT BETWEEN THE 'DATA...;' STATEMENT AND THE 'SET...;' STATEMENT.

FOR EXAMPLE, IF ONLY THE BASE YEAR QUESTIONNAIRE DATA ARE NEEDED FOR THE PERMANENT FILE CALLED "OUT01.BYQSENR" AND ONLY A FEW SECOND FOLLOW-UP FLAGS AND COMPOSITES ARE REQUIRED FOR THE WORK FILE CALLED "HIGHSCHL", THE FOLLOWING USE OF THE '(KEEP=...)' AND '(DROP=...)' OPTIONS WILL CAUSE ONLY THOSE VARIABLES TO BE AVAILABLE:

```
   DATA OUT01.BYQSENR  (KEEP=ID EB001--BBMATHSD)
        HIGHSCHL       (DROP=EB001--BBMATHSD);

     RETAIN HSTYPE PSEPLANS HSHOMEWK HSPROG HSGPA HSDIPLOM;

     SET IN01.FU2SR (KEEP=ID EB001--BBMATHSD SEX RACE2 HSPROG
                     HSHOMEWK HSDIPLOM PSEPLANS HSTYPE HSGPA);
```

REMEMBER THAT THE VARIABLES THAT ARE KEPT IN THE NEW FILES WILL ORDINARILY APPEAR IN THE SAME ORDER IN WHICH THEY OCCUR IN THE MAIN SYSTEM FILE "IN01.FU2SR", REGARDLESS OF THE ORDER OF THE LIST IN THE '(KEEP=...)' OR '(DROP=...)' OPTIONS. IN THIS EXAMPLE, THE 'RETAIN...;' STATEMENT IS USED FOR REORDERING SOME OF THE VARIABLES. SINCE THE VARIABLES "SEX" AND "RACE2" DO NOT APPEAR IN THE RETAIN STATEMENT, THEY WILL BE KEPT LAST IN THE NEWLY-ORDERED FILE CALLED "HIGHSCHL".

3) YOU MAY HAVE TO DELETE AT LEAST ONE THIRD OF THE LABEL CARDS GIVEN IN THE SAS CONTROL CARDS BECAUSE OF SAS SYSTEM LIMITATIONS AT MANY COMPUTER INSTALLATIONS. VARIABLE LABELS ARE AS SHORT AS POSSIBLE IN THE CARDS AND THE SYSTEM FILE, SO THAT MORE OF THEM CAN BE USED SIMULTANEOUSLY.

4) THE LARGE NUMBER OF "VALUE" CARDS IN THE PROC FORMAT SECTION OF THE SAS CONTROL CARDS AND THE DOCUMENTATION FILE REQUIRES THAT A SPECIAL DD STATEMENT BE PLACED JUST AFTER THE // EXEC SAS CARD TO INCREASE THE CAPACITY OF THE FORMAT LIBRARY DURING A SAS RUN:

```
     //LIBRARY DD SPACE=(TRK,(25,25,60))
```

IF THIS CANNOT BE DONE ON THE COMPUTER YOU ARE USING, IT MAY BE NECESSARY TO DELETE SOME VALUES.

5) WHEN WORKING WITH LARGE FILES, IT MAY BE NECESSARY TO OVERRIDE THE DEFAULT WORK SPACE WITH THE FOLLOWING DD CARD:

```
      //WORK DD UNIT=SYSCR,SPACE=(CYL,(40,40))
```

PLACE THE //WORK DD CARD JUST AFTER THE // EXEC SAS CARD, (OR AFTER THE //LIBRARY DD CARD, IF THAT IS INCLUDED AS WELL).

6) THE FORMATS GIVEN IN THE PROC FORMAT STEP (IN THE SAS CONTROL CARDS AND IN THE DOCUMENTATION FILE) ARE NOT PERMANENTLY ASSOCIATED WITH EACH VARIABLE. WHENEVER THEY ARE NEEDED FOR A PROCEDURE, IT IS NECESSARY TO INCLUDE THEM IN THIS 'PROC FORMAT' STEP BEFORE THE PROCEDURE THAT WILL USE THEM, AS SHOWN IN THE FOLLOWING EXAMPLE:

```
//FREQS JOB NEOBGS1,HSB,TIME=2,REGION=1280K
//  EXEC SAS,OPTIONS='NOGRAPHICS',REGION=1280K
//LIBRARY DD SPACE=(TRK,(25,25,60))
//WORK DD UNIT=SYSCR,SPACE=(TRK,(1000,1000))
//IN01 DD DSN=NEO.FU2SR.MAINPUB.SAS,
//        UNIT=SYSDA,
//        DISP=SHR
//SYSIN DD *

PROC FORMAT;

VALUE YESNOV 1='YES'
             2='NO';

VALUE SE13V 1='YES, GRADUATED'
            2='NO, STILL TRYING'
            3='NO, DROPPED OUT'
            4='NO, BUT RETURNED'
            7='REFUSED'
            8='MISSING DATA';

PROC FREQ DATA=IN01.FU2SR;
FORMAT   SE3A  YESNOV.
         SE13  SE13V.;

TABLES SE3A*SE13;
TITLE EMPLOYMT FEB 1984 BY "DID YOU COMPLETE HIGH SCHOOL?";
```

AT THE END OF THE FORMATS GIVEN IN THE SAS CONTROL CARDS AND IN THE DOCUMENTATION FILE, THERE IS A FREQUENCY PROCEDURE (IN COMMENT FORM) THAT CONTAINS A "FORMAT...;" STATEMENT WITH EVERY VARIABLE FOR WHICH THERE IS A FORMAT. THIS "FORMAT...;" STATEMENT WILL SAVE TIME FOR USERS BECAUSE IT CAN BE USED IN ANY SAS PROCEDURE.

WHEN USERS CREATE THEIR OWN FORMATS, THEY SHOULD KEEP IN MIND THAT A FORMAT FOR A CHARACTER VARIABLE MUST HAVE A FORMAT NAME BEGINNING WITH '$', AND THAT FORMAT NAMES MUST NOT END IN A DIGIT (THIS IS WHY THE FORMAT FOR THE VARIABLE "RACE2" IS "VRACE2X").

7) SAS CREATES MISSING VALUES FOR VARIABLES THAT ARE NOT CODED (VALUES FOR VARIABLES ON THE RAW DATA FILE THAT ARE LEFT 'BLANK'). ON THE HS&B FILES, RESPONSES WERE LEFT BLANK FOR NONPARTICIPANTS. THIS COULD CREATE PROBLEMS FOR THE SAS USER WHEN

VARIABLES ARE RECODED USING THE 'IF THEN' AND 'ELSE' STATEMENTS. THE FOLLOWING EXAMPLE SHOWS THIS POINT.

BB057L - IMPORTANC-HAVING LEISURE TIME (FROM THE BASE YEAR SECTION)

MULTIPLE PUNCH	6	3
MISSING DATA	8	372
TOTAL		11500

IN REALITY, THERE ARE 11,995 CASES ON THE SENIOR FILE EVEN THOUGH THIS FREQUENCY TABLE SHOWS 11,500 (THE FREQUENCY WAS RUN ON BASE YEAR PARTICIPANTS ONLY, BY SELECTING WITH THE FLAG "BYPART"). 495 CASES WERE NONRESPONDENTS IN THE BASE YEAR AND THUS WOULD APPEAR AS BLANKS ON THE RAW DATA FILE AND AS MISSING ('.') ON THE SAS SYSTEM FILE FOR ALL BASE YEAR QUESTIONS. IF THE RE-SEARCHER USED THE FOLLOWING SAS STATEMENTS, A POSSIBLE ERROR IN ANALYSES COULD RESULT.

```
IF BB057L EQ 1 THEN LEIS_IMP=1;         * ("NOT IMP");
 ELSE IF BB057L GT 3 THEN LEIS_IMP=.;   * ("MISSING");
  ELSE LEIS_IMP=0;                      * ("IMPORTANT");
```

THE VARIABLE LEIS_IMP WOULD, AS THE SAS STATEMENTS ABOVE SUGGEST, BE CODED 0, 1, AND MISSING, BUT THERE WOULD BE 495 EXTRA 0'S BECAUSE THE SAS-DEFINED MISSING WOULD BE INCLUDED IN THE LAST LINE. THIS PROBLEM COULD HAVE BEEN ALLEVIATED BY USING THE PARTICIPATION FLAGS WHEN DEFINING THE WORKING DATA FILES.

8) ANOTHER PROBLEM WITH SAS MISSING VALUES ARISES WHEN "LESS THAN" (I.E., LT OR <) AND "LESS THAN OR EQUAL" (I.E., LE OR <=) ARE USED. SAS CONSIDERS MISSING VALUES TO BE LESS THAN ZERO. THEREFORE, "LESS THAN" STATEMENTS MAY INCLUDE MISSING VALUES UNINTENTIONALLY, AS SHOWN IN THE FOLLOWING EXAMPLE:

BB058A - POSITIVE ATTITUDE TOWARD MYSELF (FROM THE BASE YEAR)

RESPONSE	CODES	FREQUENCY
AGREE STRONGLY	1	4179
AGREE	2	5557
DISAGREE	3	719
DISAGREE STRONGLY	4	106
NO OPINION	5	565
MULTIPLE PUNCH	6	1
MISSING DATA	8	373
TOTAL		11500

```
IF BB058A <= 2 THEN SELFIMAG=1;                 * ("POSITIVE");
 ELSE IF (3 <= BB058A <= 4) THEN SELFIMAG=2;    * ("NEGATIVE");
  ELSE SELFIMAG=.;                              * ("MISSING");
```

THE 495 BASE YEAR NONPARTICIPANTS WILL RECEIVE A VALUE OF '1' FOR THE VARIABLE "SELFIMAG", BECAUSE THE SAS-DEFINED MISSING VALUES ARE CONSIDERED BY SAS TO BE LESS THAN 2.

9) IT IS WISE TO SORT ALL DATA FILES BY ID (STUDENT ID) BEFORE MERGING HS&B DATA FILES. ON SOME HS&B FILES, THE STUDENT ID VARIABLE IS NOT NAMED 'ID' AND THUS SHOULD BE CHANGED USING ID=STUDNTID BEFORE SORTING AND THEN MERGING.

FOR VERY LARGE FILES, THE USER MAY ENCOUNTER PROBLEMS WHEN SORTING. VARIOUS OPTIONS MAY BE ADDED TO THE // EXEC SAS CARD TO CIRCUMVENT THESE PROBLEMS. A SUGGESTED EXAMPLE IS GIVEN BELOW (CONSULT THE SAS MANUAL FOR DESCRIPTIONS OF THESE OPTIONS):

```
// EXEC SAS,OPTIONS='NODYNALLOC',REGION=1280K,SORT=30
```

10) IT IS SUGGESTED THAT THE USER INCLUDE THE 'LENGTH' STATEMENT WHEN CREATING NEW VARIABLES, IN ORDER TO SAVE SPACE AND COMPUTER MEMORY.

11) HEGIS DATA CAN BE MERGED TO THE HS&B FILES BY USING THE FICE CODES THAT ARE CONTAINED ON THE FILES.

12) FOR MANY TABULATIONS, PROC TABULATE PRODUCES THE MOST READABLE OUTPUT. THE SAS USER MAY USE THE FORMAT STATEMENTS (PROVIDED) FOR CLASSIFICATION VARIABLES TO PRODUCE THE ROW VALUES OF TABULATE TABLES.

13) USE THE N.C.E.S. AND N.O.R.C. DEFINED COMPOSITE AND CLASSIFICATION VARIABLES WHENEVER POSSIBLE TO SIMPLIFY PROGRAMMING. THESE VARIABLES REQUIRED MANY HOURS (DAYS) TO CONSTRUCT. FOR MANY OF THE CLASSIFICATION VARIABLES, SOURCES OF DATA FROM OUTSIDE HS&B WERE MERGED INTO THE HS&B DATA TO CONSTRUCT THE VARIABLES.

14) SAS AND SPSS-X SYSTEM FILES ARE NOW INTERCHANGEABLE AT MANY COMPUTER INSTALLATIONS. CONTACT YOUR OWN FACILITY TO OBTAIN THE INFORMATION NECESSARY TO CREATE A SPSS-X FILE FROM SAS AND VICE VERSA.

15) NOTE: IN THE SAS SYSTEM FILE AND IN THE SAS CONTROL CARDS, RESERVED CODES (E.G., '8' FOR 'MISSING DATA', '6' FOR 'MULTIPLE PUNCH') ARE NOT RECODED TO MISSING.
